A celebration of London life

If my donation can make a little difference, bring comfort or simply peace of mind, and help one more Birkbeck student to reach graduation, I will feel privileged.

The marriage between Birkbeck and London is strong and successful. In good times and in bad, from boom time to wartime, the College and the capital have remained loyal to each other and have thrived. 2014 was no exception as our staff, students and alumni worked with organisations and individuals across the metropolis to support George Birkbeck’s ideals and advance evening higher education for busy Londoners. For these reasons, and because 85% of our students are Londoners, it seems appropriate to dedicate this issue of BBK to London – Birkbeck’s home, one of our greatest assets, and one of the greatest cities in the world. Our connections with the history and future of London life resonate throughout these pages.

From its beginnings at the Crown and Anchor Tavern on the Strand in 1823, the heart of the College has only moved a couple of miles and has never left the capital. The London Mechanics’ Institute, as Birkbeck was known in those days, was based at Southampton Buildings in Chancery Lane from 1835. Brayns Buildings in Fetter Lane was the home of the Birkbeck Literary and Scientific Institution from 1865, and in 1952 Birkbeck College moved to Malet Street. Birkbeck’s reach has also expanded eastwards recently thanks to the opening in 2013 of University Square Stratford. The £33m campus is contributing to the further regeneration of an area transformed by the Olympics, and our presence in east London has led to an exciting corporate partnership with ArcelorMittal. The steel and mining company behind the distinctive ArcelorMittal Orbit sculpture is funding scholarships at Birkbeck (pp8–9).

Drawing on material from Birkbeck’s archives, an article about World War One (pp48–49) demonstrates the resilience of the College and its community during tough times. Staff assisted and taught Belgian refugees in London, while other Birkbeckians gave battlefield honours from fighting overseas. Other articles encourage you to engage with our research, including looking for everyday clues to life in seventeenth- century London (pp27), and reading the online serialisation of Our Mutual Friend by Charles Dickens (pp50–51).

The Lord Mayor of London, who is also the Vice-President of Birkbeck, discusses the College’s role in the capital and his own role as “salesman for the City” (p6). Moreover, Claude Morais, alumnus and Labour MEP for London, describes how studying at Birkbeck has helped shape his political career (p46).

As ever, BBK celebrates the achievements of our students. Articles about our students, staff, fellows and alumni make for inspiring reading, and are the lifeblood of the magazine. They led to BBK issue 31 winning a 2014 Silver Circle of Excellence award in the annual magazine category of an international competition organised by the Council for the Advancement and Support of Education. If you would like to share your story or thoughts about the magazine, please do get in touch.

Guy Collender, Editor

Master’s report

This focused way of learning attracts a special type of student – one who is dedicated to their studies and determined to improve themselves. That’s why studying at Birkbeck is both intense and enjoyable – and why it changes people’s lives.

The year 2013–2014 also marked a turning point in the College’s finances. A further round of College-funded PhD studentships will open for applications shortly, with a particular emphasis on interdisciplinary and collaborative themes. Birkbeck’s researchers gained many accolades in 2013–2014 for their contributions to generating new knowledge, and the College has secured many prestigious and valuable research grants (see pp 12–13). In addition, £600,000 of funding was received from the Wellcome Trust for Birkbeck to invest in strategic areas of importance and in public understanding of research.

Endnotes

1. This is calculated as the average number of full-time students paying £9,000 per year, as the government’s move to cap fees at £9,000 has yet to be implemented.

2. The Guardian will launch Guardian Space and reopen the Midland Goods Shed at London King’s Cross as a hub for events, activities and courses, with Birkbeck as a key educational partner in this initiative.

3. Birkbeck was shortlisted for the Times Higher Education magazine’s prestigious University of the Year 2014 award, and our students voted us number one for student satisfaction in London in the National Student Survey.

4. Our achievements, especially the growth of our three-year undergraduate degrees taught in the evenings, were widely recognised. Birkbeck was shortlisted for the Times Higher Education magazine’s prestigious University of the Year 2014 award, and our students voted us number one for student satisfaction in London, as the National Student Survey.

5. There is soaring demand for postgraduate recruitment, as applications and enrolments are up significantly after a difficult couple of years. There is soaring demand for postgraduate study.

6. The Guardian will launch Guardian Space and reopen the Midland Goods Shed at London King’s Cross as a hub for events, activities and courses, with Birkbeck as a key educational partner in this initiative.

7. Birkbeck was shortlisted for the Times Higher Education magazine’s prestigious University of the Year 2014 award, and our students voted us number one for student satisfaction in London in the National Student Survey.

8. The Guardian will launch Guardian Space and reopen the Midland Goods Shed at London King’s Cross as a hub for events, activities and courses, with Birkbeck as a key educational partner in this initiative.
From crisis to modelling the future of higher education

Birkbeck’s three-year degrees go from strength to strength

Birkbeck’s three-year intensive undergraduate degree programmes, which have been offered at the College since 2001, have shown strong growth for the fourth consecutive year. The three-year degrees offer students the opportunity to graduate in the same timeframe as those at traditional daytime universities, but with the distinct advantage that they can combine their study with work and employers. Since 2012, when tuition fees were increased due to the removal of government funding, the numbers of part-time students on Birkbeck’s four-year courses have fallen dramatically, and the intensive programmes have enabled the College to survive this challenging period. The College has also demonstrated that it remains true to its mission to make higher education accessible to all those who can benefit from a transformative power of learning. The three-year students are from a black or minority ethnic background, 42% are in receipt of financial support, and, while an unprecedented 30% are now school leavers, 20% are mature learners.

Tricia King, Pro-Vice-Chancellor, External Relations, said: “When considering how to respond to the challenges we faced in 2012, Birkbeck never lost sight of our original mission of making higher education accessible to everyone who can benefit from it. We’re extremely proud that as our student numbers grow, we’re still attracting non-traditional students in large numbers, and we are able to offer them the flexibility, study support and financial support that they require to succeed and to transform their lives through higher education.”

In August 2014, the College was shortlisted for the prestigious Times Higher Education magazine’s University of the Year award, in recognition of the success of the College’s response to the fall in part-time numbers. The College’s award entry highlighted the fact that not only have three-year intensive evening degrees saved the College, but their success and popularity at Birkbeck could lead to changes across the higher education sector as other institutions seek ways to provide the flexibility that today’s students want.

Isabelle Portier, Birkbeck’s Head of Marketing and Recruitment, said: “The benefits of our unique approach are widely recognised by both our students and their employers. In particular, we’re seeing students of all ages and levels of experience wanting to benefit from flexible study that enables them to build their professional experience alongside academic study. We expect to see numbers on these courses continue to grow.”

As the number of students completing degrees in the same timeframe as full-time students increases, the College has continued to highlignt the importance of part-time study and the fact that, across England, numbers have fallen drastically. The courses most affected appear to have been short, entry-level undergraduate courses, which often serve as routes into higher education for the least confident students, who would be unlikely to enter university via other routes. These programmes enable students to build intellectual confidence and work towards undergraduate level qualifications. A Birkbeck briefing document highlighting the importance of these courses was sent to policy-makers and politicians in June 2014.

King concluded: “We are delighted to see numbers on these courses continue to grow. As the number of students completing degrees in the same timeframe as full-time students increases, the College has continued to highlight the importance of part-time study and the fact that, across England, numbers have fallen drastically. The courses most affected appear to have been short, entry-level undergraduate courses, which often serve as routes into higher education for the least confident students, who would be unlikely to enter university via other routes. These programmes enable students to build intellectual confidence and work towards undergraduate level qualifications.

In our student numbers grow, we’re still attracting non-traditional students in large numbers, and we are able to offer them the flexibility, study support and financial support that they require to succeed and to transform their lives through higher education.”

Michael Peltier, 22, chose Birkbeck’s three-year degree in BSc Accounting because he wanted to kick-start his career by working and studying at the same time. He is successfully combining his evening studies with daytime work at a hedge fund and is eager to graduate as soon as possible. He said: “I am already seeing the fantastic benefits of studying and working simultaneously, and this innovative approach will help me in the job market in future. Many of my friends are struggling to find good jobs, but I know I will be in a different position. When I graduate, I’ll have great prospects ahead of me, with an internationally recognised degree, a job in my chosen field, and three years of valuable and relevant experience in the workplace. It’s very competitive out there, and Birkbeck gives you that edge on graduation.”

""
Corporate partnerships fund scholarships and transform lives

A new focus on corporate philanthropy is leading to a win-win situation for students, Birkbeck and major companies

Things happen when universities and businesses combine forces. Expertise, resources and ideas are shared, research is generated, and innovative solutions and new companies are formed. For example, the internet giant Google began life as a research project at Stanford University, and many other technology companies, including Hewlett-Packard and Yahoo, can trace their roots back to the same university campus. Closer to home, some 1,500 companies, including spinouts (based on intellectual property produced in universities and start-ups (created by university staff and recent graduates), have emerged from UK universities and research institutes since 2000, according to The Spinouts UK Survey.

Birkbeck is no stranger to working with business, and staff have recently intensified their efforts to work with firms to generate new research and support students. Three major schemes are underway (see below) and more corporate partnerships are expected to be signed in the coming months.

Good Energy PhD studentship: researching renewable energy

One recent leading collaboration involves Birkbeck and Good Energy – the 100% renewable electricity supplier. As part of a four-year initiative, Good Energy is funding a PhD studentship to address some of the most pressing environmental issues of the day.

Marit Stromberg (pictured right) was selected for the studentship and began her research at Birkbeck in autumn 2014. Michael Lesada, from Colombia, is studying for an MSc in Marketing Communications. For the past seven years he has worked at the Colombian Coffee Growers Federation. Mr Lesada said: “Receiving the Santander Scholarship – as well as being a really big help financially – is an acknowledgement of my commitment to working towards improving the lives of coffee producers. It is really important to me that my aim and plans in this area have been acknowledged in this way.

Santander scholarships and travel bursaries

Scholarships are also at the heart of Birkbeck’s Santander Universities initiative, which supports scholarships and travel bursaries as part of its Santander Universities initiative, which supports higher education at more than 1,100 institutions across the globe. The first Santander scholars – all from South America – began their studies at Birkbeck in autumn 2014. Michael Lesada, from Colombia, is studying for an MSc in Marketing Communications.

Another major donation to Birkbeck in the last year has been received from ArcelorMittal – the world’s leading steel and mining company. Both the College and the company are committed to widening access to higher education in east London and the partnership complements their existing projects in this part of the capital. Birkbeck is playing its part by providing evening study opportunities to meet the growing aspirations of the people of east London at University Square Stratford – its £33m state-of-the-art campus shared with the University of East London in Stratford.

Three major corporate partnerships are underway and more corporate partnerships are expected to be signed in the coming months.
What is the role of Birkbeck in the capital?
By providing opportunities to study for students from diverse social and educational backgrounds, Birkbeck offers an inclusive and challenging environment for those wanting to learn and acquire new skills. In fact I am particularly keen on Birkbeck since your Master, Professor David Latchman CBE, advises the City of London Corporation on the fantastic Mansion House Scholarship scheme, which supports overseas students studying at British universities.

Given your distinguished career at Kleinwort Benson and your chairmanship of prominent financial organisations, including the London Investment Banking Association, what advice would you give to students planning to establish careers in the City?
My advice would be to throw yourself into whatever area of work you have an interest in, meet as many new people as possible and bring an infectious enthusiasm with you every day. Those attributes, combined with hard work and dedication, will mean students see first-hand how the City offers up so many possibilities and opportunities.

Could you please summarise the role of the Lord Mayor?
My role is to act as an ambassador for the City of London automatically and live here. Making sure that we have the right meeting – presidents, prime ministers, governors of central banks and ministers, will mean students see first-hand how the City offers up so many possibilities and opportunities.

What is your favourite aspect of the Lord Mayor’s show?
The show has often been described as the oldest street party in the world and being able to soak up the atmosphere and lead what is a real spectacle is something that I am thrilled about. They will be the main beneficiaries of my Appeal and have a jam-packed programme of events and opportunities to help raise funds. My hope is that in raise over £1.5m for this year’s Appeal, which is an ambitious but achievable target.

What is your travel plans for 2015?
In November 2014, Alan Yarrow – a distinguished financier and alumnus – became the Lord Mayor of London. He told Birkbeck what Birkbeck means to him, and also explained his role as “salesman for the City”.

Could you please summarise the role of the Lord Mayor?
My role is to act as an ambassador for the City of London automatically and live here. Making sure that we have the right meeting – presidents, prime ministers, governors of central banks and finance ministers.

Travel is an integral part of your role as the global ambassador for the City. What are your travel plans for 2015?
I am looking forward to spending time in South America, South East Asia, and also explained his role as “salesman for the City”.

The contribution and impact of Birkbeck academics have been recognised by major grants and by national and international academic institutions

**Awards**

Birkbeck’s pioneering and innovative approach to combining work and study has been recognised with a £1.47m award from the Wellcome Trust’s Institutional Strategic Support Fund. This award will enable the College to develop new, flexible undergraduate and postgraduate courses, further College-wide strategic development will be enabled by a grant of up to £600,000 from the Wellcome Trust’s Institutional Strategic Support Fund.

The Wellcome Trust has also awarded £500,000 to Dr Sanjib Bhakta (right), Reader in Molecular and Structural Biology, Department of Biological Sciences and Institute of Structural and Molecular Biology, for his research into the causes of autism and autistic traits. A prestigious Distinguished Fellowship in Pharmaceutical Sciences has been awarded to Dr Sanjib Bhakta (right), Reader in Molecular Microbiology, Department of Biological Sciences and Institute of Structural and Molecular Biology, for his research on tackling antibiotic resistance in tuberculosis.

**Recognitions**

Birkbeck Fellow Michael Slater and College alumni Chen Ilia Kwan were each awarded an MBE in the Queen’s Birthday Honours List. One of the world’s most highly regarded Dickens scholars, Professor Slater, Emeritus Professor in the Department of English and Humanities, was recognised for his services to literary scholarship.

The Janet Taylor Spence Award for Transformative Early Career Contributions has been awarded to Dr Angelica Ronald (right), Department of Psychological Sciences, by the Economic and Social Research Council. The Janet Taylor Spence Award in recognition of her research into the decision-making and language-learning aspects of human cognition.

Funded by the Wellcome Trust Investigator Award, Dr轻松Birnisch, Department of History, Classics and Modern Languages, will lead a four-year project, The Refractant Internationalists, on the history of international collaboration driven by concerns about public health crises.

As Britain heads towards its next general election, Dr Rosie Campbell, Department of Politics, will be conducting a comprehensive survey of the attitudes, background and experiences of the parliamentary candidates.

**Lectures and Events**

 recognitions

- Dr Gillian Woods won the Bellwether Fictions Award for Best Radio Drama Script, for Shakespeare’s Unreformed Virtues
- Dr Gasden, Lecturer in History and Gender Studies, by the Higher Education Academy in recognition of his championing of the use of digital technologies in teaching and learning.
- The European Space Agency (ESA) has appointed Ian Crawford, Professor of Planetary Science and Exploration Science Advisory Committee, the senior ESA advisory body on the scientific exploitation of its spaceflight programmes.
- Literary prizes won by academics in the Department of English and Humanities in 2014 include the Prix du Roman Francais, by Senior Lecturer Benjamin Wood for Le Complexe d‘Eden Bellocq, the French translation of his novel The Bellewether Revisited. Dr Gillian Woods won the Shakespeare’s Globe Book Award for her book Shakespeare’s Unreformed Virtues, while Colin Trevan and Hannah Silva won the Tinwood Radio Drama Award for their radio play Marathons Tales.

Professor Costas Douzinas, School of Law, has been awarded the 2014 James Boyd White Award for lifetime contribution to scholarship by the Association for the Study of Law, Culture and the Humanities.

**The Wellcome Trust in central London (Wellcome Images)**
Intriguing and political in the Tudor court, events were discussed during a lively and wide-ranging conversation between Birkbeck’s Professor of Creative Writing Russell Gelyn Jones and novelist Hilary Mantel. Mantel discussed her Booker Prize-winning novel, *Bring up the Bodies* (2012), at the event organised by Birkbeck and the Booker Prize Foundation. This is the second book in an unfinished trilogy about the rise and fall of Henry VIII’s shadowy chief minister Cromwell. *Wolf Hall* covers Cromwell’s rise under Henry’s divorce of Catherine of Aragon and subsequent marriage to Anne Boleyn in 1533. *Bring up the Bodies* opens with Cromwell ascendant and charts the collapse of Henry’s marriage to Anne Boleyn, her assassination by Jane Seymour and Cromwell’s coolly legalistic and ultimately bloody, enigmatic account of the events.

In his opening remarks, Wolf Hall reveals Cromwell’s rise under Thomas Wolsey, his orchestration of Henry’s divorce of Catherine of Aragon and subsequent marriage to Anne Boleyn. The first volume opens with the king’s marriage to Anne, while the second opens with her execution. Cromwell’s place of birth, that she accessed his voice and interiority and composed the novel’s opening line, “So now get up.” Mantel delighted the audience by revealing that the eagerly awaited third novel, *The Mirror and the LIGHT*, will focus on Cromwell similarly felled, awaiting the executioner’s axe. Wolf Hall covers Cromwell’s rise under Thomas Wolsey, his orchestration of Henry’s divorce of Catherine of Aragon and subsequent marriage to Anne Boleyn in 1533. *Bring up the Bodies* opens with Cromwell ascendant and charts the collapse of Henry’s marriage to Anne Boleyn, her assassination by Jane Seymour and Cromwell’s coolly legalistic and ultimately brutal machinations to fust Boleyns at the king’s behest, which culminated in her beheading in 1536. At the event at Friends’ House in December 2014, Mantel discussed how Boleyn and Cromwell were entwined rise to prominence unravels as they are replaced by a fierce, and ultimately bloodthirsty, quest for power, although Boleyn is hungry for status while Cromwell focuses on the acquisition of power. Ultimately, their entwined rise to prominence unravels and is replaced by a fierce, and ultimately bloody, enmity. Mantel was unwilling to concede to the commonplace that the historical novel, long a critically disdained genre, reflects the present more than the past. Although accepting that “every novel is written out of the sensibility of its time,” she also keenly emphasised her efforts to enter and engage with the consciousness of people who lived 500 years ago, stressing that these historical figures were “whole people” and not “pallid rehearsals” of our modern selves. The audience, which included students on Birkbeck’s successful Creative Writing programmes, enjoyed Mantel’s frankness about her working process, which involves the creation of “scenes” built on meticulous research and a less mechanical process whereby the voice, consciousness and worldview of a character is accessed, pure Mantel “right there in the scene.” The novels have been duly praised for their vitality, suspense and the thrilling sense that history is still unfolding, demonstrating Mantel’s extraordinary talent for historical ventriloquism.

This was the fourth Man Booker Prize event at Birkbeck – previous speakers include Sarah Waters, Kazuo Ishiguro and Alan Hollinghurst – and follows Mantel’s extraordinary talent for historical ventriloquism. The audience, which included students on Birkbeck’s successful Creative Writing programmes, enjoyed Mantel’s frankness about her working process, which involves the creation of “scenes” built on meticulous research and a less mechanical process whereby the voice, consciousness and worldview of a character is accessed, pure Mantel “right there in the scene.” The novels have been duly praised for their vitality, suspense and the thrilling sense that history is still unfolding, demonstrating Mantel’s extraordinary talent for historical ventriloquism. Most powerful men in Tudor England. Wolf Hall (2009), the first book and also the recipient of the Booker Prize, memorably opens with the young Cromwell reeling from an assault by his brutal father. From this startling opening onwards, the world of the Tudors is mediated through Cromwell’s consciousness. Mantel discussed how the novels gestated for about thirty years, but it was during a visit to Putney, Cromwell’s place of birth, that she accessed his voice and interiority and composed the novel’s opening line, “So now get up.” Mantel delighted the audience by revealing that the eagerly awaited third novel, *The Mirror and the Light*, will focus on Cromwell similarly felled, awaiting the executioner’s axe.

To watch a video of Hilary Mantel’s appearance at December’s Man Booker at Birkbeck, visit www.bbk.ac.uk/news/manbooker

**Talking sport at popular alumni reunions in Asia**

Meeting alumni and tacking the subject of the English Premier League’s business model were both on the agenda for Birkbeck staff during a 10-day visit to South Korea and Japan.

Birkbeck staff forged links and strengthened connections with universities, sporting organisations and alumni in South Korea and Japan during a busy tour in spring 2014. The series of events showcased Birkbeck’s strengths in Sport Management and International Business, highlighting the importance and knowledge of alumni to employers, and also revealed the deep affection shown by alumni for their alma mater.

The plan for the activities emerged from Birkbeck’s excellent reputation in South Korea and Japan. A total of 142 students from these countries have studied at Birkbeck in the last 16 years, and there is a particularly dedicated following for Birkbeck’s Sport Management programmes, with 23 students graduating since 2004. A sporting theme was selected for the sessions during the international trip.

Sean Hamil, Director of Birkbeck’s Sport Business Centre, spoke about the economic, sporting and cultural phenomena of the English Premier League at an event at the British Council’s offices in Seoul. He showed how the English League – the top football league in South Korea – can learn lessons from the successes of the business and broadcasting models developed by the English Premier League, which competes in 5’s Premier League in South Korea in 5’s with elite domestic sports.

At another event in Seoul, alumni spoke about building careers in sport. Alumni arranged the visits to the Korean Football Association; Tricia King, Pro-Vice-Master Strategic Engagement, and Alan Hollinghurst – and follows Mantel’s Orwell lecture at Birkbeck in 2007. In Japan, Birkbeck staff also met prospective students and spoke to agents working to recruit students.

Mr Hamil said: “There is deep affection for Birkbeck among our alumni in South Korea and Japan. They really appreciate Birkbeck’s heritage, the opportunities shown by our staff, and the intellectual freedom and diversity associated with studying in London. It was a real pleasure to meet my former students again and I was overwhelmed by the hospitality we were shown during the trip.”

The tour was organised by the Department of Management, the International Office, and the Development and Alumni Teams. In addition to Mr Hamil, Birkbeck’s Tricia King, Pro-Vice-Master Strategic Engagement and Recruitment, Matt Dean, Head of Marketing and Recruitment (International), and Luisa Barbaro, Alumni Engagement Manager, all took part.

Birkbeck would like to thank the alumni from South Korea and Japan for their help and wonderful support during the visits.

**Institutional fans**

Birkbeck would like to thank the alumni from South Korea and Japan for their help and wonderful support during the visits.
From an Olympian giving business advice to scientists marking the Year of Crystallography, fascinating events have attracted packed audiences throughout the year.

**Arts Week**
Arts Week 2014, which ran from 19–23 May, included nearly 40 performances, workshops, tours, readings, lectures and panel discussions and, as usual, was highly popular with alumni, current students and arts enthusiasts.

The week opened with a panel discussion on clouds as objects, metaphor and phenomena, considering these ephemeral bodies in contexts ranging from eighteenth-century meteorology and phenomena, considering these ephemeral bodies in contexts ranging from eighteenth-century meteorology and present included a debate on whether London had its own Renaissance (see feature on pp 26–27).

A panel discussion on writing new plays for the Shakespearean stage drew on the expertise of Birkbeck creative writing lecturer and playwright David Eldridge (below left) (whose latest play Holy Warriors was performed at the Globe last summer) and Shakespeare scholar Gillian Woods (whose book Shakespeare’s Unformed Fictions won the Shakespeare’s Globe Book Award in August 2014).

Also drawing on the links between Birkbeck and London’s cultural identity, Neil Tatarin Thomas gave a lecture on the role to be played by art in confronting Britain’s troubling imperial past, based on her experience of working on a major Tate Britain exhibition – ‘Art and Empire’ – planned for 2015.

Events focusing on London past and present included a debate about whether London had its own Renaissance (see feature on pp 26–27). A number of Arts Week events were captured on podcasts and blogs, which can be accessed at www.bbk.ac.uk/artweek2014. Arts Week 2015 will run from 18–22 May.

More information will be made available at: www.bbk.ac.uk/artweek

**Business Week**
Business Week 2014, which ran from 25–26 June, coincided with the FIFA World Cup and drew inspiration from the world’s greatest football tournament.

The theme for the series of public events was ‘From London to Rio: The business and politics of mega sport events.’

Leaders from the worlds of business and sport explored the legacy of London 2012 and the impact of the World Cup in Brazil. Keynote speakers included: Richard Ayers, founder and CEO of digital media firm Seven League, who discussed the impact of digital technology; Adrian Moorhouse MBE (above), swimmer and Olympic gold medalist, who identified key factors in sport and their application to business; Neale Coleman CBE, deputy chair of the London Legacy Development Corporation, who reflected on the legacy of 2012; and David Bernstein, former chairman of the Football Association, who highlighted challenges on governance-related issues in football.

Around 800 visitors attended the thought-provoking events, where they were also able to enjoy Brazilian music and Brazilian-themed hospitality arranged for Business Week.

**Law on Trial**
Scientific evidence was the theme for Law on Trial 2014, which took place from 16–20 June. The School of Law’s Professor Renata Salecl began the series of events with a lecture about the interplay between law, neuroscience and psychoanalysis.

Throughout the week, academics from Birkbeck and other universities joined legal practitioners to discuss the use of scientific evidence in legal scenarios. Subjects scrutinised included evidence in rape cases, the use of new technologies (such as satellite imaging and DNA analysis) to uncover state crimes and mass violence, deaths in custody, and the role of experts.

The School’s Annual Law Lecture in October 2013 was another highlight in the calendar. Angela Davis – the renowned American political activist and academic – spoke about the freedom struggle, including the emancipation proclamation, the civil rights movement, and the murder of Stephen Lawrence. Her lecture attracted 800 attendees. Birkbeck’s Visiting Professor Michael Mansfield QC responded to her address and chaired the question and answer session.

**Science Week**
Science Week 2014 was packed with innovative activities, including lab tours, a session about writing for a non-scientific audience, and one-to-one advice about careers in science.

There was a significant focus on crystallography (the study of atomic and molecular structures), as 2014 was the International Year of Crystallography. Emeritus Professors Paul Barnes and David Moss spoke about the past and future of the subject.

Other topics discussed by academics from Birkbeck’s School of Science and Technology included Dr. Atushi Senju speaking on the importance of face-to-face communication for babies, Dr. Louise Dusonchet on mindfulness meditation, Dr. Martin Ingsoul on the evolutionary secrets of garden plants, Professor Hilary Downes on the Earth and the Earth, and Professor Rick Cooper on routine behaviour.

The week, which ran from 28 June to 4 July, began with SciSirem, organised in association with Science London, with three days looking at science from different perspectives, including the science behind special effects in film.

To watch events from Science Week 2014 visit: www.bbk.ac.uk/science/about-us/events/science-week

**Social Sciences Week**
Politics, the environment and the concept of change were all under discussion from 16–19 June during Social Sciences Week 2014. The week provided an opportunity for members of the public to engage with diverse and thought-provoking topics.

The programme of events drew on the wide-ranging and exciting research being undertaken by scholars within Birkbeck’s School of Social Sciences, History and Philosophy, and also featured high-profile external speakers.

The week included: a talk on “Hobsbawm the Communist” with Professor Sir Richard Evans (University of Cambridge); a discussion of politics and photography with Martin Agles (former photographer for The Guardian) and Birkbeck’s Department of Politics’ first writer-in-residence, documentary photographer and poet Carlos Reyes Manzo; and a panel discussion on the concept of change in different disciplinary contexts.
Birkbeck alumni are sharing their knowledge and expertise in a range of innovative mentoring programmes. Our year, is the 'Get Talking' programme. Trainer Stephanie Peckham and mentors at the Business at Birkbeck reception in November 2014

"Many universities focus their alumni approach, particularly with prospective students, is incredibly popular. "I am a qualified coach, although I don’t practise any more, so this is an ideal opportunity to keep these skills fresh. My mentor has already sent me her objectives, so I’m looking forward to getting started. She is also a coach, so our similar backgrounds may make for some interesting dynamics! "Doing my MSc at Birkbeck gave me the research bug, and changed my work in change management and wanted to be a mentor because I like the idea of helping people recognise what they really want, challenging their mindsets and making the most of new opportunities. "When training the mentors, we talk about the difference between mentoring and coaching, and we model conversations to help them deal with certain situations. We make the point that they are there to listen and ask questions – not just talk about how great their university experience was! Both sides find the training really useful – and we get great feedback at the end of the programmes as well."

Birkbeck alumni are also enthusiastic volunteers for the ‘Business at Birkbeck’ mentoring programme, a partnership between the College, the East London Business Alliance and a number of London companies. It pairs final-year undergraduate and postgraduate students in the School of Business, Economics and Informatics and the School of Law with alumni from those industries and with Birkbeck’s corporate volunteers at Credit Suisse and PricewaterhouseCoopers.

The programme recognises that Birkbeck students are typically older and many have aspirations to work in the corporate world. While some students simply want guidance about CVs and interview skills, others are keen to take advantage of the opportunity provided by Birkbeck to network and to learn from working professionals already employed in these environments in a capital city as vibrant and international as London.

Some 15% of the 50,000 alumni on Birkbeck’s database have offered some sort of assistance to the College, a figure far higher than the average for the university sector. "This means we have a fantastic pool of graduates to call on. Birkbeck alumni are so passionate about their experience, they want to give something back,” Luisa Barbaro added. Both alumni mentors and mentees are given training before their sessions start, to help them make the most of the programme. Trainer Stephanie Peckham explained: “We encourage the mentees to be really clear about what they want to get out of it, and explain that the mentor is not there to give the mentee a job. "When training the mentors, we talk about the difference between mentoring and coaching, and we model conversations to help them deal with certain situations. We make the point that they are there to listen and ask questions – not just talk about how great their university experience was! Both sides find the training really useful and we get great feedback at the end of the programmes as well."

Birkbeck alumni Rick Payne is a first-time mentor with the Business at Birkbeck scheme. A qualified chartered accountant now working in management research at the Institute of Chartered Accountants in England and Wales, he completed an MSc in Organizational Behaviour at Birkbeck in 2008. He said: "I’d been to a few alumni events, and when I heard about the mentoring scheme I thought this would be a good way to give something back. I believe lifelong learning is fundamentally important, and that Birkbeck is one of the few places, in my view, that really delivers on this."

"I am also a qualified coach, although I don’t practise any more, so this is an ideal opportunity to keep these skills fresh. My mentor has already sent me her objectives, so I’m looking forward to getting started. She is also a coach, so our similar backgrounds may make for some interesting dynamics! "Doing my MSc at Birkbeck gave me the research bug, and changed my career, so I really wanted to give back to the College in whatever ways I could."

Giles Forrest works for Credit Suisse and is now in his second year as a Business at Birkbeck mentor. He said: “I

18 OUR YEAR

Passing on the Birkbeck baton

Birkbeck alumni understand just how challenging it can be to combine evening study with a demanding working day or busy family life. It’s because of this that so many of them become involved in Birkbeck’s innovative, and rapidly growing, mentoring programmes offered to applicants and current students at the College.

One such initiative, now in its third year, is the ‘Get Talking’ programme. Alumni are paired with prospective students – people who want to talk to students, or they only interact with applicants at open days,” said Luisa Barbaro, Birkbeck’s Alumni Engagement Manager. “This one-to-one bespoke approach, particularly with prospective students, is incredibly popular. “Birkbeck alumni are also enthusiastic volunteers for the ‘Business at Birkbeck’ mentoring programme, a partnership between the College, the East London Business Alliance and a number of London companies. It pairs final-year undergraduate and postgraduate students in the School of Business, Economics and Informatics and the School of Law with alumni from those industries and with Birkbeck’s corporate volunteers at Credit Suisse and PricewaterhouseCoopers.

The programme recognises that Birkbeck students are typically older and many have aspirations to work in the corporate world. 18 OUR YEAR

Passing on the Birkbeck baton

Birkbeck alumni are sharing their knowledge and expertise in a range of innovative mentoring programmes.
From classroom to workplace

Our students thrive in the workplace and now new initiatives are underway to boost their employability even further.

Birkbeck’s students are not only amongst the highest average graduate salary in the UK of £29,432 according to FindAJobTest.co.uk, and that 80% of them are working or are engaged in further study according to the Destination of Leavers from Higher Education survey.

Birkbeck’s students are also often driven by their desire to change career, and they appreciate advice geared towards helping them on their journey. These interests, of both students and employers, are being advanced thanks to a range of exciting new projects at Birkbeck.

Birkbeck has recently launched its own specialist recruitment consultancy, Birkbeck Talent. The service is designed to match students and graduates with leading employers, who are eager to tap into the university’s pool of talented students.

Employers can register their full-time and part-time vacancies with Birkbeck Talent, to receive a shortlist of candidates specifically selected for their role. Students register their CV, interests and employment preferences and then apply for roles via an online portal. If students are unsuccessful at application or interview, Birkbeck Talent will provide constructive feedback. The overall goal of the scheme is to help students gain valuable employment experience, while also providing employers with an easy and effective way to source talented students and graduates.

Eleanor Martin is the Recruitment Manager at Birkbeck Talent. She said: “Students and employers are really enthusiastic about the scheme. Many students are keen to enhance their career by working full-time while they study. Employers are keen to recruit Birkbeck students, because they recognise the wealth of skills, motivation and talent within our student body.”

The activities of Birkbeck Talent are also being complemented by various initiatives run by Birkbeck’s Careers and Employability Service, which is open to both students and alumni.

Free workshops at Birkbeck, one-to-one appointments, and online tools offering everything from CV advice to an interview simulator tool, as well as industry reports and resources, are available. A dedicated employability advisor is also based in the employability space within the Student Centre. A new advisor is also based in the employability and Employability Service, which is open to both students and alumni.

Talent - to work with alumni as well as current students - is a constant process, so we are very willing to offer a range of resources to boost your career. Whether it is online or face-to-face, we offer a range of resources to improve your career. Students and employers are both interested in working with the College and our student body to further develop the Birkbeck community to make small changes that together will make a big difference to reducing our carbon footprint.

Chair of Governors

Harvey McGrath

Changing policies and pressures within the higher education sector, combined with Birkbeck’s focus on recourse of students and their ability to combine evening study with work and/or part-time vacancies with Birkbeck Talent, to receive a shortlist of candidates specifically selected for their role.

As ever, student support is the focus of many donors’ generosity, with a noticeable emphasis on postgraduate study, where there is very limited external funding available. The majority of donations come from alumni, who also contribute their time, knowledge and expertise.

The number of alumni involved in mentoring and volunteering programmes has nearly doubled in the last two years. Over 300 prospective, current and international students have benefited from these initiatives with a tangible impact on student retention and recruitment (as seen on pp18-19).

College finances

The College’s total income was £104,463,000, an increase of 5.4% on the previous year, thanks to continuing strong growth of student numbers at both undergraduate and postgraduate level. A focus on strong financial management has resulted in a surplus of over 6.5%, which combined with the surplus from the previous three years, gives the College a financial base on which to plan and build for the future.

Green agenda

The number of alumni involved in mentoring and volunteering programmes has nearly doubled in the last year.

The College has a sound financial basis on which to plan and build for the future.
Birkbeck celebrates research success

A major audit of the UK’s research confirms Birkbeck as a leading research–intensive university

Birkbeck has been ranked 30th in the UK for its research by the Times Higher Education following the publication of the 2014 Research Excellence Framework (REF) results in December 2014. This places the College above Russell Group institutions such as Cardiff, Leeds, Liverpool, Queen Mary, Sheffield and York. The results of the REF – an audit of the quality of research across the UK’s universities – show that 73% of Birkbeck’s research is rated ‘world-leading’ or ‘internationally excellent’ – the top two categories. Of the 14 subject areas that Birkbeck submitted to the REF, half were rated in the top 20 nationally.

Birkbeck’s science submissions performed exceptionally well, with Psychological Sciences rated 5th in the UK and the College’s two joint submissions with UCL – Earth Systems and Environmental Sciences, and Biological Sciences – rated 6th and 11th respectively. In keeping with the rest of the sector, our research was found to have improved significantly since the last such research assessment in 2008, when 56% of our research was rated in the top two categories. This sectoral improvement partly reflects the strategic decision by many universities to submit only their most research-active academics for assessment. Birkbeck submitted 83% of eligible staff to the 2014 REF, well above the national average. This led to the College’s strong performance in league tables which take into account the percentage of staff, rather than just the overall grade point average of research, submitted. Our outstanding subjects in the Times Higher Education’s ‘research intensity’ league tables (published 1 January 2015) included: Art, history and culture; Conservation and heritage; Science and biomedicine; Politics, society and the law; and Work and the economy, ranked 7th.

Similarly, the College performed strongly in league tables based simply on the percentage of research judged to be ‘world-leading’, indicating the very high quality of much of our research. The 2014 REF put a new emphasis on universities demonstrating the impact of their research beyond academia. Birkbeck’s strong results showed the relevance of the College’s research to many aspects of our everyday lives, whether influencing policy-makers in their thinking about early years education, working with major companies such as Proctor & Gamble to educate parents about their child’s development, or trialling new drugs for the treatment of cancer. In three subject areas – History, Art and Design, and Psychology, Psychiatry and Neuroscience – 100% of Birkbeck’s submissions received the highest ratings for impact.

Professor Stephen Frost, Pro-Vice-Chancellor, said: “Birkbeck’s results show the enormous amount of hard work that has gone on in recent years by our academics. At a time of turmoil in the higher education system, they have continued to produce top-quality research. This also reflects the College’s research strategy, which is deeply committed to creating the best possible conditions for academics to be in research and to pursue their own intellectual interests. “As well as celebrating the outstanding performance of some of our top disciplines, it is pleasing that new areas such as Sociology and our reconfigured Modern Languages group did well, reflecting the College’s ability to build new research areas over time.”

During the College redeveloped its website research pages to showcase the broad scope of our research and its impact under six themes (shown left): arts, history and culture; conservation and heritage; learning, education and development; politics, society and the law; science and biomedicine; and work and the economy.

Nationally, the main purpose of the REF is to determine the bulk of research funding which each UK university will receive between 2015 and 2021. Funding decisions based on the REF results will be announced in spring 2015.

Read more about research at Birkbeck at www.bbk.ac.uk/research and listen to a podcast with Professor Frosh at birkbeckvoices.episode28

Scientists have known for some time that dust created in the Bodélé Depression in the Sahara is picked up by winds, carried across the Atlantic and deposited on the Amazon rainforest, where it plays an important role in fertilising the plants and trees. In 2014, new research led by Birkbeck and involving colleagues from the University of Leeds and Diamond Light Source showed that the reason the dust is so effective at fertilising the Amazon is that it contains fish bone - a rich source of phosphorous, which is an essential nutrient for photosynthesis. However, this phosphorus - fish dust is a finite resource, which will not be available to the rainforest indefinitely. The researchers analysed dust samples taken from the Bodélé Depression in Chad, in north-central Africa, which is the world’s largest single source of dust. Thousands of years ago the area was what is known as a mega-lake – covering an estimated 1,000,000 km2 – but over the last 10,000 years the lake has dried up. The skeletons of the fish and other organisms that lived in the lake still remain in the top layer of dust in the lake bed.

Professor Karen Hudson-Edwards (see p24), from Birkbeck’s Department of Earth and Planetary Sciences, who led the study, has explained why the source of the phosphorous is so significant. She said: “Phosphorus occurs in dust in many different forms, some of which are more soluble than others, and therefore are more readily available to plants. Previously we didn’t know whether the phosphorous in the Bodélé dust was from inorganic and less soluble sources, or from organic sources. This study helps explain why the Bodélé dust is so important to rainforest growth.”

Phosphorus from biogenic sources (such as fish bone) is more soluble than inorganic sources (such as in rock). This means that the biogenic sources are readily available to plants, whereas inorganic sources will take longer to be dissolved and utilised. A paper based on this research, published in September 2014 in the journal Geochimica et Cosmochimica Acta, also highlighted the fact that the top layers of the Bodélé Depression, which contain the biogenic phosphorous and are the source of the dust, will eventually be fully eroded.

Professor Hudson-Edwards said: “At the moment we don’t know how long the Bodélé Depression will continue to provide phosphorus to the Amazon. With the rainfall already under threat from human activity, we now hope to conduct further research to ascertain when this important source of fertiliser will run out.”

Windblown from Africa to the Amazon, dust from ancient fish skeletons is key to rainforest growth

New professors

Five members of Birkbeck staff were promoted to the post of Professor in 2013–2014

Richard Cooper
Professor of Cognitive Science
Professor Cooper’s research is concerned with the cognitive processes underlying the control of thought and action. He combines computational and empirical methods to address questions such as how we are able to do multiple tasks concurrently, what constraints there may be on these due to cognitive limitations, and how these processes may break down following brain injury. In 2011, he co-authored a major monograph, The Organisation of Mind, which was awarded a British Academy Medal in 2013. In 2015, he will take up the role of Executive Editor of the international journal Cognitive Science, having previously been associate editor on Cognitive Science, the international journal.

Karen Hudson-Edwards
Professor of Environmental Geochemistry and Mineralogy
Professor Hudson-Edwards studies the processes and products of the biogeochemical cycling of contaminants and nutrients in mine wastes, waters, dusts and contaminated land (see also p23). She is particularly interested in how minerals dissolve in the presence and absence of bacteria and organic materials, and how toxic elements are released during this process. Her team is using this knowledge to inform remediation schemes and to protect humans and ecosystems. Professor Hudson-Edwards has recently conducted work in Australia, Bolivia, Cyprus, Spain and Pakistan. Edwards has recently conducted work in Australia, Bolivia, Cyprus, Spain and Pakistan. She is involved in the Academic Network project.

Caroline Humfress
Professor of History
Before moving to Birkbeck in 2004, Caroline Humfress was Assistant Professor of Rhetoric and Law at the University of California, Berkeley and prior to that a research fellow at the University of Oxford. Since October 2012 she has been Assistant Dean for Postgraduate Research Students in the School of Social Sciences, History and Philosophy at Birkbeck. Her research explores the fundamental question ‘What is the “state” and how might it – or how should it – relate to law and religion?’, with particular reference to the Roman Empire.

Caroline Humfress
Professor of History
Before moving to Birkbeck in 2004, Caroline Humfress was Assistant Professor of Rhetoric and Law at the University of California, Berkeley and prior to that a research fellow at the University of Oxford. Since October 2012 she has been Assistant Dean for Postgraduate Research Students in the School of Social Sciences, History and Philosophy at Birkbeck. Her research explores the fundamental question ‘What is the “state” and how might it – or how should it – relate to law and religion?’, with particular reference to the Roman Empire.

Carolyn Moores
Professor of Structural Biology
Professor Moores’ research focuses on the cytoskeleton – the skeleton-like structures found inside all cells. The cytoskeleton is essential in providing shape and organisation to cells and acting as a track for molecular motors transporting cargo within cells. The Moores Group takes pictures of individual cytoskeleton filaments using an electron microscope, then analyses these pictures computationally to calculate the three-dimensional shape of cytoskeleton filaments. Studying the cytoskeleton helps us to understand both how healthy cells work and how malfunctions of the cytoskeleton cause disease. Accordingly, the Group’s research involves aspects of brain development, cancer and malaria. Professor Moores also acts as Academic Co-ordinator for doctoral programmes in the Institute of Structural Molecular Biology and is involved in the Athena Scientific Women’s Academic Network project.

Nikolaus Wachsmann
Professor of Modern European History
Professor Wachsmann specialises in the history of discipline and punishment in modern Germany, with a focus on policing, law, terror and resistance in the Third Reich. Before joining Birkbeck in 2005, he was a research fellow at Downing College, University of Cambridge, and a lecturer at the University of Sheffield. He is director of doctoral students in the Department of History, Classics and Archaeology and teaches BA and MA modules. His first book, Hitler’s Prisons: Legal Terror in Nazi Germany (Yale), was widely translated and was joint winner of the 2005 Longman History Today Book of the Year award. He has since published extensively on modern German history and has directed a major Arts and Humanities Research Council research project at Birkbeck on the early Nazi camp system. Professor Wachsmann’s general history of the concentration camps will be published in spring 2015.

Teaching excellence

Inspirating and innovative teaching are the hallmarks of the winners of the 2014 Birkbeck Excellence in Teaching Awards

Dr Frederic Dick (above), Reader in Cognitive Neuroscience in the Department of Psychological Sciences, and Dr Amber Jacobs, Lecturer in the Department of Psychosocial Studies, have both been recognised this year for their contributions to teaching at Birkbeck.

Very interactive classes
Dr Dick teaches the Plasticity, Constraint, Expertise and Talent module of the Psychology BSc or MSc. He was nominated for a Birkbeck Excellence in Teaching Award (BETA) for his innovative work and his commitment to making this challenging subject matter accessible to a diverse group of learners. He said: “The module looks at how the brain adapts to optimise learning and skill acquisition. The aim is for students to understand the science of how and why it is that some people become experts in different fields, such as music, sport or chess. They also get to understand how this can be directly applied to their own studies.”

“Dr Dick’s class is very interactive: the students learn about each other’s skills as well as achieving new digital skills and confidence in using software. Feedback consistently referred to the ‘inspiring experience’ of making the video essay and watching other people’s, and how this process of getting inside the visual medium transformed their approach to visual culture, making them more politically and critically aware about the ways in which images are constructed and manipulated.”

Caroline Humfress

The aim is for students to understand the science of how and why it is that some people become experts in different fields, such as music, sport or chess. They also get to understand how this can be directly applied to their own studies.”

“In my recent Master’s course in Visual Culture, I introduced the ‘audiovisual essay’ as a process of getting inside the visual medium, experimenting with the specific visual medium, using simple software such as Movie or the Windows equivalent. Students were asked to make video essays as a practice-based response to the films, photographs and theoretical texts that were set. After one practical workshop, almost all students produced ambitious video essays.”

“Many students expressed how the process gave them deeper insight into the ‘constructed-ness’ of the film images, as well as achieving new digital skills and confidence in using software. Feedback consistently referred to the ‘inspiring experience’ of making the video essay and watching other people’s, and how this process of getting inside the visual medium transformed their approach to visual culture, making them more politically and critically aware about the ways in which images are constructed and manipulated.”

Commuting through the Renaissance

Professor Sue Wiseman points out the everyday clues to our city’s Renaissance history

Did London have a Renaissance, and how can we tell? Surprisingly, some of the evidence for answering this question is available to Londoners even on our way to work. There is quite a lot of seventeenth-century London around us.

Those who travel from the west up Whitehall pass through the palace of Henry VIII, inhabited after him by Elizabeth I, James VI and I, Charles I and the later Stuarts. It is possible to roughly map the area covered by that palace using a map from the period known as the Agas map in combination with physical markers. The Banqueting House on Whitehall was built to house the celebrations, receptions of ambassadors and plays that were an important part of the Renaissance monarch’s magnificence.

The first banqueting house was built by Henry VIII, and Elizabeth I followed up with a series of temporary structures including one ‘made of great masts’, with painted canvas walls – cheap and cheerful but also chilly. When James VI and I arrived from Edinburgh, he restarted the building project in the present location and, after a fire in 1619, the structure we have today was erected on the south-west of the palace area. The building was conceived by Inigo Jones, bringing his interests in current Italian architecture, and completed in 1626, well over budget at £14,940. Once Charles I had commissioned, shipped and installed a huge ceiling painting by Rubens’ use of position as a goldsmith, merchant and powerbroker in the City to finish the job – and take the credit. The wood-lined New River is a delicate feat of engineering, which still brings water from Hertfordshire to London. It is, indeed, a river not a canal, using a gradient to take the credit. The wood-lined New River is a delicate feat of engineering, which still brings water from Hertfordshire to London. It is, indeed, a river not a canal, using a gradient to bring water into London. The New River was declared open by the Lord Mayor with a pageant written by Thomas Middleton (no relation) celebrating the arrival of London’s newly clean water. The river ended at the top of Rosebery Avenue, where street names, waterworks and a late seventeenth-century room still mark its terminus. The best way to see the New River today is to take the train to Brombourne and walk its banks and those of the River Lea.

Chancery, in south London, is also worth a trip to look at the Lumley tombs and explore the site of Henry VIII’s magnificent palace of Nonsuch. On certain days you can visit the Lumley tombs in a chapel in the churchyard of St Dunstan’s. In the 1590s Lord John Lumley, a Roman Catholic peer who had also held Nonsuch Palace, set aside the chapel for himself and his wife. The three tombs contain Lord John himself, his first wife, the renownedly learned writer and translator, Jane, and his second wife, Elizabeth, who outlived him.

Finally, the traveller from the east moves along the path of Roman routes to and through London. The Apothecaries’ Hall is just south of St Paul’s, in the middle of the Blackfriars complex where they located in 1667 when James VI and I finally granted them guild status. Although the original hall was destroyed in the Great Fire of 1666, these premises are perhaps the closest thing London has to an original guildhall, described by London’s chronicler John Strype as having “a fair pair of Gates” and a courtyard “blandly paved with broad Stones”. As you stand in the courtyard of the apothecaries, somewhere close by was the hall in which plays were staged in two different theatres. Once we realise how close together the stage and the potions were, Blackfriars plays like The Knight of the Burning Pestle, with its many jokes about grocers and apothecaries (just think about the title), seem to have newly concrete implications. Together, text and buildings allow us to think again about the spaces of the past.

Sue Wiseman is Professor of Seventeenth-Century Literature at Birkbeck.
Innovative technologies for learning and teaching

Pupils are improving their maths, and teachers are enhancing their lessons, thanks to computer systems developed by researchers at Birkbeck

There are many pedagogical benefits to using technology in the right way in the classroom and these are being demonstrated by a range of exciting projects. New tools produced by academics at the London Knowledge Lab in the Department of Computer Science and Information Systems have been piloted in schools across the world, including in London, and the feedback has been positive. The researchers follow an interdisciplinary methodology in which pedagogical theory informs the initial design of algorithms and tools. These are then iteratively evolved and enhanced through successive cycles of user-centred evaluation. Concurrently, pedagogical theory and practice are transformed through the provision of tools to education experts and practitioners.

Italk2learn
One of the major projects is called Italk2learn, which aims to develop an open-source intelligent tutoring platform that supports maths learning for pupils aged five to 11. Funded by the European Commission, this three-year, €3m project recognises that young children are much more likely to respond to spoken, rather than written, instructions and suggestions.

As part of the research, a speaking computer program has been designed to teach fractions to children aged seven to nine. Birkbeck is one of four universities involved in the research, and it is receiving approximately €500,000 for its part in the study involving schools in the UK and Germany.

Dr Sergio Gutiérrez Santos, Lecturer in the Department of Computer Science and Information Systems, is leading Birkbeck’s participation in Italk2learn, which ends in October 2015. He said: “The computer program speaks to the children, and we know this is a very effective way of teaching. The children are encouraged to talk through their answers, and voice recognition software enables the pupils to interact with them, and assess their performance. Children learn more from their mistakes than from their successes, and the Italk2learn system is designed to support their learning in an exploratory way.”

MiGen
Pupils have also benefited from computer-based tools when learning algebra, which is notoriously difficult for children to learn. In collaboration with the Institute of Education, researchers at Birkbeck have developed the MiGen system, which transforms the learning of algebraic concepts. Instead of working with symbols and equations, pupils use this software to construct 3-D shuffling patterns and, simultaneously, develop algebraic rules about the properties of their patterns. The system was tested in a schools in London, as well as at schools in Mexico, Singapore and Brazil.

MiGen’s main intelligent component, called the Generaliser, gathers information about pupils’ construction activities and uses this to make inferences about pupils’ progress in knowledge assimilation. The provision of real-time feedback to pupils without destroying the exploratory and creative potential of their interaction with the system is a major contribution of this research to the field of intelligent constructionist tools for learning and teaching. Teachers are also able to monitor the progress of their pupils thanks to a suite of Teacher Assistance tools, which can additionally suggest pedagogically informed pairings for group work, based on a detailed analysis of all the pupils and their work.

Alex Poulovassilis, Professor of Computer Science in the Department of Computer Science and Information Systems and Co-Director of the London Knowledge Lab, was one of the principal investigators on the MiGen project. She said: “This work was pioneering as it provides intelligent support to both students and teachers during constructionist learning activities. The feedback we received was very positive.”

The Learning Designer
The third major project in this area was the Learning Design Support Environment (LDSE), which was started in 2010 in collaboration with staff from the Institute of Education and other education specialists and practitioners. Birkbeck received £300,000 and €600,000 for the LDSE and MiGen projects respectively.

The LDSE and MiGen projects were mentioned in Birkbeck’s submission for the Research Excellence Framework (REF) – an audit of the quality of all the research carried out in the UK higher education sector (2014).

The projects were both included in an impact case study, entitled Intelligent constructionist tools for learning and teaching, which was part of the submission for Computer Science and Informatics – one of the Units of Assessment. The results of the REF were announced in December 2014.

For more information on research at Birkbeck, visit www.bbk.ac.uk/research

This work was pioneering as it provides intelligent support to both students and teachers during constructionist learning activities.
Over his career, Charles Dickens (1812–70) wrote fifteen novels, five Christmas novellas and hundreds of short stories and articles, while also composing thousands of letters, giving almost weekly speeches and articles, while also composing advertisements. The novel’s original monthly parts, published between May 1864 and November 1865. Each instalment cost one shilling and was 32 pages long with two illustrations and over 70 pages of advertisements. Dickensian projects are also part of a wider digital strategy within the School of Arts, with Dickensian reading through digital media, while our blog promises to become a vital future resource for students, scholars and Dickens fans alike.

Dickensian reading through digital media

Birkbeck has also been a notable contributor to the field of digital humanities and is at the forefront of utilising computing technologies to help us experience and think about Dickens in new and exciting ways. Birkbeck’s Centre for Nineteenth-Century Studies is currently orchestrating an online reading project, focused on Our Mutual Friend (1864–65), which builds on the successes of other recent digital Dickens projects. Our Mutual Friend, Dickens’s last completed novel, is encountered by most readers today as a rather hefty paperback, usually replete with an introduction, footnotes and appendices, or electronically on a tablet or e-book reader. Although the medium may change, the format — a single volume novel — remains the same. Victorian readers, however, first encountered Our Mutual Friend in 20 separate monthly parts, published between May 1864 and November 1865. Each instalment cost one shilling and was 32 pages long with two illustrations and over 70 pages of advertisements.

Our aim is recapture the materialities and rhythms of nineteenth-century serial reading through digital media, while our blog promises to become a fascinating repository of critical thinking and discussion about the novel and a vital future resource for students, scholars and Dickens fans alike.

Alongside this, we are retelling the novel on Twitter: dozens of people are composing tweets, which can be no more than 140 characters long, in the guise of the novel’s panoply of characters. One of the most famous lines in Our Mutual Friend comes in part five (September 1864), when Betty Higden delightedly exclaims, as the foundling Nelly goes to the newspaper alms, “He do the Police in different voices.” Similarly, our anonymous tweeters are taking on the voices of Dickens’s characters. They follow the trajectory of the monthly parts, but often take their own Dickensian flights of fancy, composing new dialogues, interacting with different characters and even developing online lives beyond the novel’s confines.

In a development that would have surely delighted Dickens, some of the novel’s inanimate objects, including the stuffed crocodile in Mr Venus’s taxidermy shop and Silas Wegg’s wooden leg, are also tweeting. At the end of every month, the tweets are collated on Storify, thus providing an alternative retelling.

At the end of every instalment on the first of the month, the tweets are collated on Storify, thus providing an alternative retelling.

Energy scarcity has profound implications for economies and societies, but also for the day-to-day routines of individuals and families. In the twentieth century, the realities of energy shortages extended beyond blackouts to changing work patterns and debates about the energy usage of industry versus household consumers.

Shortages were a feature of life in socialist East Germany (German Democratic Republic, GDR), from its creation in 1949. Peak-time restrictions led to factories operating late into the night from East Berlin to Karl-Marx Stadt. In Japan, following World War Two, wood charcoal and electricity were rationed and electricity and gas supplies were controlled both by official regulations and planning. Britain also faced ongoing difficulties, with frequent load shedding – not just nature or technology. It is therefore no surprise that tensions emerged not only from the destruction of war. In the same period, British factory managers were blaming shortages on ‘excessive’ household consumers.

Past disruptions tell us how unevenly burdens were distributed between different groups of consumers. In a very real sense, the course of disruption was often determined by society, based on ideas about who should have more energy and who less, and who should have it at what time of day or night. Culture and society shaped where and when the lights went out – not just nature or technology. It is therefore no surprise that tensions emerged not only between suppliers and consumers but also among consumers themselves. In historical sources, we can see how different consumers were weighed against each other. After the Second World War, British homes, for example, were far more favourably treated than Japanese households, which until the 1950s were placed at the bottom of the supply list. Yet, people did not always accept their fate. In Japan, dissatisfied consumers organised protest movements. Some just ‘cheated’ suppliers. Such distributional conflicts also affected the rhythm of day and night, as governments tried to shift electricity use out of peak hours. The lack of energy triggered a reconfiguration of work and everyday life. During the 1946–1947 fuel crisis in Britain, waking up late would have meant missing out on hot water and hot breakfast. Household chores needed to be done within specified hours when electricity was permitted, or they had to be done without electrical appliances at all. In East Germany, industrial workers were told to work into the night – in order to shift the peak hours. Such shift work had knock-on effects on eating rhythms, sleeping, shopping and child care that were particularly hard on mothers.

Today, there is once again talk among politicians and energy providers in Britain and Europe about future blackouts and a more precarious allocation of energy. Developing nations cannot expect smooth growth and energy security either. If there is one lesson from the past, it is that it is too simple to trust that technology will fix the problem. Abundance and scarcity go hand in hand. Shortages involve politics and culture, as do societies’ strategies to deal with them. What people did when the lights went out in the past could tell us something about our flexibility and resilience in the future. In addition to the research on the disruption of energy, the ‘Material Cultures of Energy’ research project includes three other themes – energy futures; how rural spaces were transformed by grids; and how people managed and experienced the transition from one fuel to another. We investigate these themes by comparing Britain, Germany, Japan, North America and India, with their different energy systems, cultures and everyday practices. The research will lead to a better understanding of the past, which will then inform how we think about, and approach, the future of energy – a subject set to grow in importance in the decades ahead.

Frank Trentmann is Professor of History at Birkbeck, and the Principal Investigator for the Material Cultures of Energy research project. Dr Shin, the Co-Investigator, began working at Birkbeck in January 2015. The project team also includes Dr Heather Chappells, of Saint Mary’s University, Halifax, Canada; Dr Vanessa Taylor, a former Birkbeck PhD student who now works at the University of Greenwich, and Rebecca Kipnis, who is currently completing her PhD at Birkbeck. The project will run until December 2017.
Professor Matthew Weait explains how the School of Law at Birkbeck has contributed to an international policing consultation on public health and human rights

When we think of police work, we typically think of it as being concerned with law enforcement and public order: the purpose of policing is the detection of criminals and keeping the peace. Even if the truth is somewhat more complex, the professional orientation of police officers towards these functions can result in unintended and negative side effects – especially in the policing of particularly vulnerable communities. Indeed, there is robust empirical evidence indicating that traditional approaches to policing can result in adverse health outcomes for those who are at increased risk of harm. In particular, a focus on their law and order function, a narrow view of what constitutes public safety, and a conservative occupational culture has meant that in many parts of the world the police have contributed to an enhanced risk of HIV infection among so-called ‘key populations’, including sex workers and injecting drug users.

The consequence of this is that sex workers wishing to avoid harassment and arrest may not carry condoms with them, thereby reducing the opportunity to practise safer sex, and drug users avoid carrying their own ‘works’, thereby increasing the possibility that they will share those of other users to increase their risk of infection with HIV and other blood borne diseases. These negative effects of traditional policing are increasingly recognised and efforts are being made to address them. An important milestone in this regard was the Amsterdam Declaration on Police Partnerships for Harm Reduction, which made to address them. An important milestone in this regard was the Amsterdam Declaration on Police Partnerships for Harm Reduction, which came up with a number of priorities and recommendations. These included the need to build police knowledge and capacity, through training and the mainstreaming of public health approaches in police work, the strengthening of police-community relations and of mechanisms and practices of police accountability, and the directing of resources towards ensuring sustainable partnerships, effective communication channels and – a longer-term goal – effecting changes in police culture.

In recognition of the value of peer education, a number of serving and retired senior officers, from South America, Eastern Europe, Africa and Asia, were interviewed by me for a film that will be used in training and advocacy. Participants also agreed the Amsterdam Declaration on Police Partnerships for Harm Reduction. A significant document in the development of progressive and evidence-based policing practice, the Declaration commits its supporters to an approach to policing key populations that respects human rights, is informed by accepted principles of harm reduction (recognising, for example, the importance of clean injecting equipment for drug users), and which will not promote rather than hinder health through active collaboration and partnership. The involvement of the School of Law in supporting the Consultation and its outputs is a matter of considerable pride to me. For many years, my research has centred on the impact of law on HIV prevention and on the lives of people living with HIV and AIDS, and I have been privileged to work both nationally and internationally on the reform of laws that hinder rather than assist efforts to end the global HIV epidemic. Much of this work has been focused on recommendations about the reform of the law ‘on the books’, and while this is important, the enforcement of law in practice is arguably even more so. The School of Law has an internationally recognised reputation for legal research and scholarship that can contribute to progressive legal change. In recent years, its capacity to build on this has been enhanced not only by the Institute for Criminal Policy Research and the International Centre for Prison Studies, both of which are now based in the School of Law, but by the successful development of its undergraduate and postgraduate provision in criminology and criminal justice. It was a pleasure to work with our expertise in these areas at the consultation, but also to put its principles into practice.

Matthew Weait is Professor of Law and Policy and Pro-Vice-Master Academic and Community Partnerships.
What the thunder said

Theatre gives psychologists insights into children’s responses to community violence and bullying

Witnessing violent events in their community, in school, on television or in computer games can affect children’s confidence and emotions, particularly if they are not given an opportunity to talk about what they have seen and how it made them feel.

Developmental psychologist Dr Natasha Kirkham, of Birkbeck’s Department of Psychological Sciences, worked with colleagues at King’s College London and the Theatre Centre in Shoreditch, east London, to see whether theatre could play a role in helping children respond to violence around them.

Dr Kirkham and her colleagues, together with playwright Ed Harris, conducted a series of workshops and group interviews with Year Five pupils (aged nine to 10) at primary schools in 10 inner-city areas with high violent crime rates in London, Birmingham, Cardiff, Liverpool and Manchester.

Harris then used material from these workshops to write a play, What the Thunder Said, which toured UK primary schools in March 2014. This play allowed the children, their parents and teachers to engage in a dialogue about the gap between what the children experience and what the adults see.

Dr Kirkham and fellow Birkbeck psychologist Dr Virginia Eatough analysed the words and expressions of the children in workshops and group interviews as part of the 18-month research project. Results showed a significant gap between the children’s lived experience and their abstract understanding of the rules they are taught. Although they know the rules, they observe that the rules simply do not work a lot of the time. In addition, these children’s threshold for behaving aggressively is low. Simply being ‘annoyed’ or having someone ‘get on my nerves’ can trigger an aggressive response. They commonly discuss vastly different types of aggressive behaviour as being equivalent. Murder and cussing can be spoken of in the same breath, with the same sense of importance.

The implication is that these children perceive their world as dangerous and that confusion regarding appropriate behaviours and correct responses is constant.

Reflecting on the innovative approach used in this project, Dr Kirkham said: “This project opened my eyes to just how important it is for developmental scientists to get out of the lab and into the field, to shake up their methods, and to listen to individual children.

“These children all had thoughtful, strong opinions about the bullying in their environments. A more open dialogue between the children and the adults in their communities is clearly necessary.

“This experience was personally and professionally cathartic for me, offering new insights into modern-day parenting, coping strategies (for children and teachers), and developmental resilience. Ultimately, it proved to me that a lot of our ideas about how to deal with bullying need to be reworked.”

Au pairing in the UK – an open door to exploitation?

The UK is home to up to 90,000 au pairs at any one time. For many families, au pairs are the only workable solution to the ‘childcare crisis’. However, often the experiences of au pairs and their host families don’t match up to expectations.

The study found that the average au pair in the UK works over 38 hours a week, although some work up to 70 hours, with expected duties sometimes including caring for elderly relatives or helping out in family businesses. Average pay is £08 per week, but 14% of au pairs do not receive the £85 a week recommended by the British Au Pairs Agencies Association.

Au pairing was traditionally supposed to offer young people the opportunity for cultural exchange, but most hosts interviewed conceded that meeting childcare needs was their motivation for employing an au pair and many au pairs and their hosts were not interested in providing opportunities for cultural exchange. 44% of those advertising for au pairs expected prior experience and 26% were only considering applicants who are already in the UK, showing that there is a decreasing differentiation between au pair and nanny roles.

The nationality of the au pair appears to influence how they are treated, with au pairs from western Europe generally working shorter hours and being given more opportunities for study and cultural exchange than those from central and eastern Europe.

Co said: “Au pairs currently have no protection in terms of working hours, pay and living conditions. They are only affordable because an au pair pair and nanny roles.

A decreasing differentiation between au

The study found that the average au pair in the UK works over 38 hours a week, although some work up to 70 hours, with expected duties sometimes including caring for elderly relatives or helping out in family businesses. Average pay is £08 per week, but 14% of au pairs do not receive the £85 a week recommended by the British Au Pairs Agencies Association.

The nationality of the au pair appears to influence how they are treated, with au pairs from western Europe generally working shorter hours and being given more opportunities for study and cultural exchange than those from central and eastern Europe.

The government introduced guidelines in June 2014, but these contain vague terms which need clarification and they need to be backed up by providing au pairs with a means of redress if they find that they are being badly treated by their host family. The fact that so many families are reliant on au pairs, in many cases, expect them to take on full-time care of very young infants highlights once again the need for access to flexible and affordable childcare. The government, and society at large, need to recognise that caring for children is valuable work, including when it is carried out in private homes. The people that do this work – including au pairs – should be recognised as workers and rewarded with appropriate wages and the respect they deserve.”

Au Pair’s Lives in Global Context: Sisters or Servants?, edited by Dr Rosie Cox and published by Palgrave Macmillan, is out now.
Another Darkness, Another Dawn: A History of Gypsies, Roma and Travellers

Gypsies, Roma and Travellers are some of the most marginalised and vilified people in society. In his Ted Talk, Lecturer in History, charts their movement from the Indian subcontinent, across the Byzantine and Ottoman empires to western Europe and the Americas, to their place in the contemporary world. He sets Gypsy experiences in the context of broader historical changes and demonstrates that history is not always about progress; the place of Gypsies, Roma and Travellers remains as contested today as it was upon their first arrival in western Europe in the fifteenth century.

Exploring Intercultural Communication: Language in Action

Zhu Han, Senior Lecturer

Investigating the role of language in intercultural communication, Zhu Han, Professor of Applied Linguistics and Communication, brings together current research and emerging theories in the field by examining how intercultural communication permeates our everyday life. She asks what we can do to achieve effective and appropriate intercultural communication, and tells us why language, culture and identity together. Her focus is on the interactions between people from various cultural and linguistic backgrounds and the interplay between cultural diversity and language practice.

Childhood, Youth and Violence in Global Contexts

Karen Vollebergh, Aria Barman, Heather Montgomery and Alison Watson (eds), Palgrave Macmillan

The common sense understanding of childhood as a protected space has led to violence against and by children being understood as spectacular or exceptional. In contrast, this collection, co-edited by Karen Vollebergh, Senior Lecturer in International Development and Childhood Studies, shows how violence enters ordinary, routine practices of childhood and children’s experiences. It brings together academic and practitioner points of view to understand how violence is enacted against children in infancy, in school, at home and on the street.

Deeds and Words: Governing Politics after Joni Lovenduski

Rosie Campbell, Sara Haden (eds), ECPRR Press

How does minimising王晓 political science, the study of politics and electoral politics? What difference do feminist political Parties and political scientists make to political institutions, policy processes and outcomes? Proposing a more flexible and inclusive model of what constitutes art historical writing, including women and other voices, the essay sets out to correct received accounts of the emergence of art history as a male bastion. She investigates the importance of female writers in developing a discourse of art history in terms of its complexity and cultural power, its increasing professionalism and reach, and its integration with other discourses of modernity. Proposing a more flexible and inclusive model of what constitutes art historical writing, including fiction, poetry and travel literature, this book offers a radically revised account of the genealogy of a discipline and a profession.

The EU: Charter of Fundamental Rights: A Commentary

Paul Watt, Karen Harvey, Jeff Kenner and Angela Ward (eds), Hart

The Charter of Fundamental Rights of the European Union has been hailed as the key political, social and economic rights of EU citizens and residents in EU law. It was approved in 2000 by the European Parliament, the Council of Ministers and the European Commission. However, its legal status remained uncertain until the entry into force of the Treaty of Lisbon in 2009. This commentary on the Charter, the first in English, written by experts from several EU member states, provides an authorative but succinct statement of how the Charter impacts on EU, domestic and international law. Co-editor Angela Ward is Visiting Professor of Law from the Court of Justice of the EU.

Women Writing Art History in the Nineteenth Century: Looking Like a Woman

Hilary Fraser, Cambridge University Press

Art history has a variety of contexts, histories and forms, which have been the focus of intense scrutiny in recent years. Cultural representations of the terrorist have received much less attention. During the twentieth century, images of terrorists as martyrs, heroes or avengers, which remove the dimension of terrorist organisations and consider terrorist organisations as political entities or movements, have been used to maintain or challenge a range of political and cultural narratives. This book brings together the work of women art historians who have written about terrorists and their representations, and whose work challenges the ways in which the terrorist has been represented and perceived in contemporary society.

Passivity Generation: Human Rights and Everyday Morality

Irene Bruna Seu, Palgrave Macmillan

“It only looks like. They would do something.” Every day we see evidence that, when it comes to human rights violations, knowledge is not a guarantee of action. What stops people from doing more to protect human rights? What factors generate passivity? Or are we simply a generation? Irene Bruna Seu, Reader in Psychosocial Studies, addresses these questions and applies a mix of psychosocial methods to understand the complexity of emotional, cognitive and ideological responses to human rights violations.

Birkbeck books

2013 – 2014

A selection of books authored or edited by staff
Our students

Our students choose Birkbeck for many different reasons, but they share a dedication to their studies and a determination to achieve.

Cassie Kaczuk
MSc Marketing Communications, breast cancer survivor

"Birkbeck gave me a new lease of life. I had always wanted to return to university, but had kept putting it off and thought I was too old to go back. Once I was diagnosed with breast cancer in January 2012, I thought I can't continue to put my dreams on hold. I went to the Open Evening the same day as I had one of my Zoladex injections.

"Studying was a great distraction from my cancer treatment and gave me something to focus on and enjoy. The cancer treatment meant I was unable to walk, my bones were weak and my concentration was poor, but I was desperate to continue with my studies. I saw Mark Penn, Birkbeck’s Disability Service Manager (see page 37), and he told me to start accepting help so that I could achieve my best. Birkbeck really helped me with different coping techniques. I received a laptop, dictaphone and special software to help overcome my memory problems."

Chris Parker
Law (LLB), legal adviser, actor and presenter

"I thought I want to go and get an education and open up the opportunities available to me in broadcasting. I wanted to satisfy my thirst for knowledge and get into factual projects, as opposed to just entertainment broadcasting. Having always been interested in the law, I decided to go to a Birkbeck Open Evening and find out more. It was just meant to be - I love the law and now I feel like I have found my calling."

"Birkbeck is a research-intensive university. You are taught by the authors of legal books and they are also practising solicitors and barristers. I have become engrossed by the law, and my studies have changed me as a person. People can learn to manage your time effectively. The staff teaching model was ideal as I was working and studying at the same time. It was a challenge combining work and study, but you quickly learn to manage your time effectively. The staff at Birkbeck are very accommodating and are always on hand to offer support.

"I thoroughly enjoyed my time at Birkbeck, meeting new people and making strong friendships. The opportunities given to me by Birkbeck were absolutely brilliant - they really exceeded my expectations."

Emma Lawley
Law (LLB), future trainee solicitor

"I have definitely achieved my ambition of working at a top City law firm thanks to Birkbeck. In 2013, I became the first paralegal recruited by Berwin Leighton Paisner (BLP) from Birkbeck’s School of Law. A year later I was offered, and accepted, a training contract with BLP to commence in 2016.

"Birkbeck appealed to me because it is part of the University of London and because of the high calibre of teaching on offer. The evening teaching model was ideal as I was working and studying at the same time. It was a challenge combining work and study, but you quickly learn to manage your time effectively. The staff at Birkbeck are very accommodating and are always on hand to offer support."

"As I come from Ghana, I would not have been able to afford living in London without the financial support from Birkbeck. The Anniversary Scholarship gives me peace of mind and enables me to concentrate on my PhD without having to look for paid work. I am being paid to learn – it is an excellent opportunity.

"Development discourse and issues in London greatly influence international development agendas. It is interesting to be right here and have some first-hand exposure to the governance and way of life here."

Michael Roaampton
PhD Geography, former Migration and Youth Development Specialist for the United Nations

"Studying here will allow me to carry out my studies with supervision from people who have been trailblazers in their field, while developing relationships with great thinkers. I am sure that after this PhD, I will be equipped with thought-provoking development perspectives and become a better critical thinker and innovator. All the staff and students at Birkbeck have been very welcoming.

"I have definitely achieved my ambition of working at a top City law firm thanks to Birkbeck. In 2013, I became the first paralegal recruited by Berwin Leighton Paisner (BLP) from Birkbeck’s School of Law. A year later I was offered, and accepted, a training contract with BLP to commence in 2016.

"Development discourse and issues in London greatly influence international development agendas. It is interesting to be right here and have some first-hand exposure to the governance and way of life here."

Tosh and Alison Moller
BSc Geology

"We looked at several universities, but the clincher was that Birkbeck’s course was accredited and offered 100 days in the field – none of the other universities could match that. I found the fieldwork particularly rewarding. There’s no substitute for looking at rocks up close and it’s satisfying to recognise their relationship in the field. It was a great bonus to be able to study, with my wife, the same subject at the same time. We were always studying for the journey, rather than the destination, but it was still very satisfying to graduate last year."

"The tutors were absolutely fantastic and really inspired me to go away from class and to learn more for myself. When the tutors were talking about their research in class, you could see them light up and they were so passionate about it that it made me realise that was what I wanted to do.

"The things I learnt at Birkbeck definitely prepared me for studying my undergraduate degree in BSc (Honours) Nutrition at King’s College London.

"Studying at Birkbeck definitely changed me and helped me to become a really dedicated and conscientious student. Now I want to get out there and apply my knowledge to a professional situation."

Kate Rususovski
Certificate of Higher Education in Life Sciences for Subjects Allied to Medicine

"Before I started, I thought that I would be the oldest in the class and the only person studying in order to change career. In fact, I was neither. My classmates were fabulous and there was a massive cross-section of people. I made some great friends who I’m still in touch with three years later.

"The tutors were absolutely fantastic and really inspired me to go away from class and to learn more for myself. When the tutors were talking about their research in class, you could see them light up and they were so passionate about it that it made me realise that was what I wanted to do.

New Fellows

Honorary Fellowships are awarded to individuals who have attained distinction in academic or public life, who have rendered exceptional service, which may include philanthropic support, to Birkbeck, or who have, or have had, a close association with Birkbeck.

Laurel Brake, Professor Emerita of Literature

Laurel Brake, Professor Emerita of Literature and Print Culture, is a distinguished scholar and author whose long affiliation with Birkbeck began in 1975, when she completed her doctorate at the College and took up a three-year Research Assistant post.

Returning in 1988 to head the Literature in English programme in Continuing Education, Professor Brake taught at Birkbeck for 20 years, before retiring in 2018 as Professor of Literature and Print Culture. During that time she helped to found the Certificate in Creative Writing, an interdisciplinary MA in Gender and the MA in Creative Writing.

Professor Brake served as a staff Governor and was for many years equal opportunities officer for the Association of University Teachers trade union. Since her formal retirement, Professor Brake has continued to teach an MA module at Birkbeck as Vice-Master for 11 years. Stepping down in summer 2014 now allows her more time for his research interests, while he continues to contribute to the College as Pro-Vice-Master for Special Projects. Among Professor Brake’s many achievements as Vice-Master has been his work in Stratford, east London, which culminated in the opening of the University Square Stratford campus in November 2013.

He said: “I have given me enormous pleasure to see the completion of this milestone. Its existence is the fruit of many years spent exploring opportunities for widening participation, developing programmes that capture the aspirations of those living in east London, and developing our relationships within that community so that they may be able to become part of the wider Birkbeck community.

“An A-level in communication and the arts, the ability to enrich people’s lives, to help them to change society.”

John McDonald has been the Member of Parliament for Hayes and Harlington since 1997. His background is similar to that of many Birkbeck students, in that after leaving school he had a series of unskilled jobs before studying for A-levels at night school, going on to study for a BSc in Government and Politics at Brunel University. He completed a Master’s in Politics and Sociology at Birkbeck, while helping to run a children’s home and working for the National Union of Mineworkers and then the Trades Union Congress.

Active in his local community as a grassroots campaigner, John McDonald joined the Labour Party and was elected to represent his home constituency of Hayes and Harlington on the GLC. In 1991, he joined Camden Borough Council as Head of its Policy Unit, later becoming Chief Executive of the Association of London Government. Following the abolition of the GLC, he joined Camden Borough Council as Head of its Policy Unit, later becoming Chief Executive of the Association of London Authorities and Policy Unit, later becoming Chief Executive of the Association of London Authorities and Policy Unit, later becoming Chief Executive of the Association of London Authorities and Policy Unit, later becoming Chief Executive of the Association of London Authorities and Policy Unit, later becoming Chief Executive of the Association of London Authorities and Policy Unit. In Parliament, he is the Chair of the Socialist Campaign Group of MPs.

Peter Westley has spent his career in the service of colleges of the University of London. After qualifying as an accountant in 1982, he joined University College London, before spending 16 years at the Institute of Education, where he was Deputy Finance Secretary.

He joined Birkbeck as Finance Secretary in 1994 and retired as Director of Finance early in 2014, having steered the College’s finances prudently through turbulent times, including the collapse of the College’s then investment banker, Barings, in 1995.

During the late 1990s, Peter Westley studied for a BA in Accounting and Management at Birkbeck, graduating with a First in 2000. He said: “I wanted to refresh my knowledge and I am particularly pleased that I was able to do this at Birkbeck. I am now enjoying my retirement and the arrival of a grandson. I am immensely proud to have been offered a Fellowship and look forward to continue being involved with Birkbeck in the future.”
Jacqueline Allan has a remarkable story to tell and is extremely grateful to Birkbeck. She received a scholarship and first-class honours for her BSc in Psychology at the College, and is now continuing her studies at PhD level, thanks to one of Birkbeck’s 20 Anniversary Scholarships for PhD students. The doctoral scholarships, which cover tuition fees and provide a stipend of £15,726 per year, were offered in 2013 to mark Birkbeck’s 190th birthday.

Six years ago, Jacqueline started a charity called Diabetics with Eating Disorders to offer support to people suffering from diabulimia – an eating disorder in which a person with type 1 diabetes reduces their insulin intake to lose weight. She said: “I knew that getting a psychology degree would be the best way to make a difference through my charity work and that was a driving force for me.”

Jacqueline, who at the time suffered from diabulimia, delayed starting her undergraduate degree for a year so that she could make sure she was healthy enough to be successful. She credits her achievements at Birkbeck with playing an important part in her recovery, saying: “It’s been totally transformative; and I feel completely different about myself. I now get my value from my academic progress. That’s what’s kept me going – knowing that I’m improving all the time, and that what I do now is so much more important than what I look like. I can’t really put it into words how grateful I am to Birkbeck. Birkbeck has turned my life around.”

Jacqueline’s PhD research looks at psychological risk and protective factors in variations of blood sugar in those with type 1 diabetes. She explained: “If blood sugar levels in people with type 1 diabetes are not controlled by daily insulin injections, then the body begins to destroy its own tissues. There are people with type 1 diabetes who deliberately omit to take their insulin in order to achieve rapid weight loss. This is incredibly dangerous and can lead to serious health complications and death. It is an eating disorder in its own right with a very different etiology and prognosis from anorexia and bulimia, but it remains largely unrecognised.”

“My professional goals and my personal goals are one and the same thing now and when I actually stop and think about that, it’s mind-blowing. My work is my PhD, but my PhD is done solely on behalf of people who have supported me and who I support.”

Richard Burr has had a busy year. He was the bookies’ favourite to win the BBC’s Great British Bake Off, achieving the ‘star baker’ accolade five times during the series, but he narrowly missed out on taking the title in the final. His outstanding performances and affable personality meant that invitations to appear on television shows and to judge cake sales continue to pour in.

Richard gained a first-class BSc in Biodiversity and Conservation at Birkbeck in 2012. He was in the process of applying to a Master’s degree in Geographic Information Science at the College, when he found out that he would be appearing on Bake Off.

Clearly some people who are not afraid of a challenge. Richard began his first degree at Birkbeck shortly before the birth of his first daughter, and by the time he graduated, he had a second daughter too. He also managed to combine evening study with new parenthood and running the family building business in north London.

Richard recalled: “One evening I mentioned to my wife that the first thing I’d do if I won the lottery would be to go to university and get a degree. From that moment on it became inevitable that I would end up at Birkbeck. My wife Sarah (née Bradshaw) studied for her Master’s degree in London Studies there from 2001 to 2003 and loved it. And of course it’s the ‘go to’ institution for people that work. It’s perfectly set up to support people that have a life outside of their studies.”

Having dropped out of his first degree at another university, Richard was anxious about going back to study. He said: “After my first university experience I’d ultimately assigned myself to the academic scrapheap. Birkbeck was so different from my time at university though - the tutors consistently made studying a joy.”

“I don’t think I would have applied for the Bake Off if I hadn’t had the confidence boost that Birkbeck gave me and the experience of taking the plunge with something and it working out brilliantly. The Bake Off and evening study crossed over in a lot of ways as well. For both of them you need to be determined, work hard and love what you’re doing.”

The television series may now be over, but there are still opportunities arising from it, and Richard is also “trying to keep the family business spinning”. Nor has he abandoned the idea of coming back to Birkbeck for his Master’s degree. “I’m in a very lucky position,” Richard mused, “I have three avenues open at the moment – building, baking and Birkbeck. At the moment I don’t want to close off any of those, so I’m trying to live three lives at once!”

Richard Burr’s baked goods were a hit on television screens nationwide during The Great British Bake Off in 2014.
From politics at Birkbeck to policy-making in Brussels

Claude Moraes is a trailblazer in European politics. The Labour MEP was one of the first Asian MEPs to join the European Parliament in 1999, and in July 2014 he was re-elected for his fourth term. Still only 49, the London MEP is already one of the veterans of the European Parliament. After studying law in his hometown of Dundee, Moraes decided, aged 21, to study an MSc in Politics and Administration at Birkbeck. He was attracted by the evening classes, as he could combine studying with working as an adviser to Labour MPs John Reid and Paul Burstow (now both Lords). He persuaded the late Ben Pimlott, then Professor of Politics and Contemporary History at Birkbeck, that, despite his youth, he was a suitable candidate for postgraduate study. Moraes said: “I told Ben Pimlott what I had read and I managed to persuade him to admit me. Ben was a real politician’s writer, as he combined journalism and serious writing with geeky politics.”

However, juggling work and study was not straightforward. Moraes recalled, with affection, when he was hauled into the office of the late Paul Hirst, Professor of Social Theory. Hirst explained that there was a departmental swipe at regarding the reasons for Moraes’ absences, and he was presented with his money on work-related visits to Scotland. Hirst wanted to know whether he had won the bet. Moraes confirmed that he was right – and made sure that he did not miss classes thereafter.

More than 25 years after completing his part-time studies at Birkbeck, Moraes will recognise the impact of his course on his career. He said: “My experiences at Birkbeck, including the influence of leading left-wing thinkers, have really shaped my career as a Labour politician. The course gave me a broader perspective, and I became more mature as I was studying with people older at the time.” Moraes is now the chairman of the European Parliament’s influential and wide-ranging Civil Liberties, Justice and Home Affairs Committee, which tackles matters including immigration and asylum, cross-border crime, data regulation and anti-discrimination law.

He added: “The EU is about economic growth, but also about values – from democracy to the stewardship of the environment. Our challenges relate to how the EU handles austerity and how it addresses youth unemployment. Undoubtedly, the EU will stay together and grow, but the UK’s position is uncertain. That day of reckoning is coming. I will be campaigning for the UK to stay in a reformed EU.”

The long view: reminiscing about university life since the 1950s

Birkbeck Fellow and former Chair of Governors Professor Michael Wise CBE MC looks back at a lifetime of teaching and research in London

From teaching geography to Birkbeck’s students to working with a succession of Birkbeck’s Masters, Professor Michael Wise has been part of the Birkbeck community for more than 50 years. Now aged 96, Professor Wise was Chair of Governors for six years in the 1980s, and became a Fellow in 1989. He retired as Emeritus Professor of Geography in 1991 after more than 30 years’ teaching at the London School of Economics, and after a lifetime of distinguished contributions to the field of geography. A former President of the International Geographical Union and recipient of the Royal Geographical Society GII Memorial Award and Founder’s Medal, Professor Wise was awarded the CBE in 1979.

While working at LSE, Professor Wise was recruited to the University of London intercollegiate lecture programme in 1952 by Birkbeck’s then Professor of Geography, Sidney Woolridge. Professor Wise recalled: “These lectures were held at Birkbeck because it was central – students would come from all the different London colleges. They were held on a Friday and repeated in the evening for Birkbeck students, which wasn’t too popular with my wife, because it meant I got home so late!”

“I lectured in economic geography for my students during the day and then gave a similar lecture in the evening. Although it was a long day for me, I never had any reluctance from the students. Birkbeck students, being older, always seemed pleased to ask questions and have some discussion. I enjoyed teaching at Birkbeck very much, and was very pleased to be involved for so many years.”

Over the years, Professor Wise has seen the College adapt to many changes and challenges, and he came to know a succession of Birkbeck’s Masters. “I knew Ronald Tress [Master from 1968 to 1977] well and then George Overend [1979–1987],” Professor Wise recalled. “As an economist, Tress took a broad approach to the subject, and was very keen on teaching – he was also good at responding to what students wanted. I liked him and got on well with him. He was a very good Master, as was Overend. ‘It was the same with Tessa Blackstone [1987–1997], a very able Master of whom I saw a great deal and who I worked with closely over the years.”

Now enjoying his retirement, Professor Wise attends Fellows’ dinners and is delighted to still be a part of the Birkbeck community.
Birkbeck during the Great War

The resiliency of Birkbeck’s community during World War One ensured that teaching continued at the College and led to individual battlefield honours.

The unprecedented conflict of 1914 to 1918 had a profound impact upon life at Birkbeck and the lives of its staff, students and alumni. Special lectures at the College focused on patriotism and trench making, classes had to be abandoned because of Zeppelin raids, and at least 530 Birkbeckians fought overseas. According to the roll of honour, 87 members of Birkbeck’s community, including five past or present members of staff and one governor, were killed. In total, 55 honours and distinctions were awarded to Birkbeckians for service during the Great War.

The details of Birkbeck’s history during this turbulent period are all recorded in the minutes of College meetings and Birkbeck’s annual reviews – the early twentieth-century predecessors of BBK magazine. The documents, stored in the archives in Malet Street, pay tribute to the fallen and describe in frank terms what life was like during the Great War, when Birkbeck was based at Breams Buildings, Fetter Lane, in the City of London.

The College took swift and uncompromising action to support the war effort following the outbreak of hostilities on 4 August 1914. On 17 August, a special joint meeting of the executive, finance and alterations committee was convened, and it resolved to leave posts open and to continue to pay salaries (minus naval or military pay) to staff away on active service. At another committee meeting in October 1914, it was resolved that “no German or Austrian student be allowed to attend the College during the war.”

According to the 1914-1915 annual review, John Charles Bigham, 1st Viscount Mersey, delivered an “eloquent and impressive address on War and Patriotism”, which was followed by many enrolments, including to the College Officers’ Training Corp. In the same report, references are made to students enlisting for special chemical work in the Army, in response to a call from the War Office. Birkbeck staff, students and alumni joined the forces during the war, including the inspirational and pioneering Dame Helen Gwynne-Vaughan CBE DSc, who received the CBE honour because of her wartime service. As well as being Birkbeck’s first female professor, and a prominent botanist and mycologist, she served as the Controller of the Women’s Auxiliary Corps in France and was the Commandant of the Women’s Royal Air Force.

Other individuals mentioned in the annual reviews include Captain Sidney Eames MC, who was appointed Chief Instructor at a Trench Mortar and Bombing School in France, and HN Dale Richards BSc, a former assistant in the Zoology Department, who joined the navy as a surgeon and was killed in the Mediterranean when his ship was torpedoed. The sadness and severity of the losses incurred during the war were referred to year after year in the annual reports – “The College, like other educational institutions, has suffered under the blight of war” (1914-1915); “The College may feel a pride mingled with sadness at the loss of these promising lives” (1915-1916); and “The death of so many strong and promising young men brings home to the College the supreme sacrifice of so many strong and promising young men” (1916-1917).”

Despite the horrors and perils of war, soldiers still read and exhibited a desire to learn at the front. According to the annual report of 1917-1918: “It is noteworthy and of excellent augury for the future that in the army on the Continent books of study and literary pursuits have proved the best form of relief during periods of quiescence.”

The global conflict and fighting overseas directly affected Birkbeck. The College provided assistance and free education to Belgian refugees, about a dozen of whom attended classes. Zeppelin raids also led to classes being suspended at Birkbeck on the first evening of the academic year in 1917. Student numbers halved from 930 in 1913-1914 to 465 in 1917-1918. Female students also outnumbered male students in 1917-1918 (the figures were 239 and 226 respectively) as more and more men were recruited to the battlefield.

Despite the “disaster” of war, the annual reviews document how teaching and learning continued at Birkbeck. The report from 1915-1916 reads: “The College has adapted itself to the changed conditions, and with slight modifications, has fulfilled its regular functions.” Three years later, a similar sentiment was echoed in the latest report: “During the war all the regular courses of instruction were maintained with marked success, in spite of difficult conditions due more particularly to shortage of staff.”
Professor Patrick McAuslan MBE (1932-2014)

Pioneering Professor of Law

Patrick McAuslan MBE was a member of the team that established the Birkbeck Law School in 1993, where he taught and researched until his death in January 2014. He was a pioneer and world expert in land law, law reform, sustainable development, the alleviation of poverty and planning law.

In a tribute to Professor McAuslan, Professor Costas Douzinas, Professor of Law and Director of the Birkbeck Institute for the Humanities, said: “Patrick studied at Oxford University and taught at the LSE, Warwick, UCL and Birkbeck. His Birkbeck role was a crucial address and a public service which was unique in the history of higher education in London. He was a true colleague who always gave his best, not only as a_ teacher, but as a_ person, an_ intellectual, a_ human being._”

He was renowned for his work on the development of London and its traditional industries in the East End. He later became Professor of Geography at the University of Reading, latterly also becoming Professor at the University of California, Berkeley. He took up the chair of Planning at The Bartlett in 1989. He was awarded a Birkbeck Fellowship in 2012.

Professor Sir Graham Hills (1926-2014)

Principals and Vice-Chancellor, University of Strathclyde and Viscosity university leader, Professor Sir Graham Hills won a scholarship to his local grammar school but left with the equivalent of O levels when his family were bombed out of their home during the Second World War. He had to take work as a laboratory assistant at chemical company May and Baker, from where he gained practical experience of industry that informed his academic career. Colleagues encouraged him to enrol at Birkbeck, and despite the College being hit in bombing raids, he completed his BSc in Chemistry in 1946 and received his PhD from Birkbeck in 1950. The experience led to him becoming a persuasive advocate for widening access to higher education. A leading expert in town planning, Professor Sir Peter Hall was Professor of Geography at the University of Sheffield. He later became the university’s Deputy Vice-Chancellor before being appointed to Strathclyde as Principal and Vice-Chancellor in 1990. His academic achievements were recognised with a knighthood in 1988 and through many fellowships and honorary degrees. He was a Birkbeck Fellow in 1984.

During the 1990s he was involved in public policy, advising the then Environment Secretary Michael Heseltine on the early vision for the Thames Gateway and Channel Tunnel rail link. Peter Hall gained a Master’s and doctorate in geography at St Catharine’s College, Cambridge and began his academic career at Birkbeck in 1957 as an Assistant Lecturer in Geography. He had an early fascination with the historical development of London and its traditional industries in the East End. He later became Professor of Geography at the University of Reading, latterly also becoming Professor at the University of California, Berkeley. He took up the chair of Planning at The Bartlett in 1989. He was awarded a Birkbeck Fellowship in 2012.

Why I give

Hedge fund manager Geraldine Sundstrom improved her prospects by studying at Birkbeck – and she is now helping others to reach their goals too.

When I visited Birkbeck in October 2014, I was a bit disorientated at first. The grand entrance in Malet Street, which I last went through to sit my exams, has become the goods entrance. That is when I realised that many years have passed – and much has changed – since I was studying for my MSc in Finance (1996–1998) at Birkbeck. The main entrance has moved to Torrington Square, next to the impressive five-floor, glass-fronted library, yet the primary mission of Birkbeck as a world-class provider of higher education, taught in the evenings and catering for part-time students, still remains.

I enjoyed the unique opportunity to study for my Master’s degree part-time, while being a professional and earning a living. When it comes to providing a fair and equal chance for all, not much can match Birkbeck’s dedication to part-time students. Generations have been able to enjoy this unique opportunity.

Part-time study can be challenging. Running a professional life, student life, personal life, and sometimes supporting a family, can be incredibly demanding, verging on heroic in some cases. I almost gave up my studies halfway through because they were so hard at times. My days started at 7am at my desk in the City and typically I wasn’t back home till 11pm after my studies at Birkbeck. I didn’t hesitate, as I admire people who take on the challenge of part-time study to build a better future. It seemed natural for me to give some support, particularly for undergraduate student bursaries. If my donation can make a little difference, bring comfort or simply peace of mind, and help one more Birkbeck student to reach graduation, I will feel privileged. That’s why I am giving to Birkbeck.

1093x28 OUR COMMUNITY

OUR COMMUNITY 53
I am delighted to have become a Fellow of Birkbeck this year and to discover that, four years after London’s ‘evening university’ joined UCAS’ undergraduate admissions scheme, I am now part of an ongoing revolution. I had long been an admirer of how Birkbeck opened the gateway to higher education for those determined and motivated enough to combine degree study with day-to-day life. The stories of mature students choosing Birkbeck were remarkably similar to my own, people for whom higher education wasn’t right or practical at 19, starting careers and families, then realising it was now or never. I went to university in my 40s and it was more precious to me then, because it was a purposeful and fully committed decision. But it was only when I looked at Birkbeck’s record-breaking UCAS acceptances over recent cycles that I knew something else must be going on too. Something incredible has happened at Birkbeck in recent years. While ‘part-time’ numbers were falling across the higher education sector, numbers on Birkbeck’s innovative full-time evening undergraduate programmes grew by a staggering 308% between the 2011-2012 and 2013-2014 cycles, according to acceptances recorded by UCAS. The appeal of its intensive full-time courses - proving that career development and study are not mutually exclusive - has soared beyond what we might previously have thought of as its natural constituency. Nearly 30% of new students this year were aged 18-20, and I know many universities and colleges in the UCAS scheme will be taking notice of the way Birkbeck has communicated its vision to students, backed up by a brilliantly co-ordinated offering. Birkbeck’s portfolio of intensive, three-year evening undergraduate courses has been rapidly expanded to a total of 51 programmes available in the academic year 2014-2015. Its full-time evening offer is an innovative model that opens access to higher education for the students around whose needs it was designed. It is such a privilege to be invited to become a Birkbeck Fellow. I find myself in distinguished company with many others who, like me, are impassioned about access to the rich rewards of higher education for people who, for a variety of reasons, don’t fit the normal template of school-A level-university. Walk around Birkbeck in the evening as the lights go on and you’ll see parents taking control of their future alongside younger people determined to blend work with study. They’re all studying a subject they love, while juggling life’s necessary commitments. This fills me with optimism for the future of higher education.
