Programme Specification

1	Awarding body	University of London					
2	Teaching Institution	Birkbeck College					
3	Programme Title(s)	MRes Bioinformatics					
4	Programme Code(s)	TMRBIOTC_C					
5	UCAS code (if applicable)	code (if applicable) N/A					
6	Home Department	ome Department School of Biological Sciences					
7	Exit Award(s)	PG Cert					
8	Duration of Study (number of years)	FT 1 year; PT 2 years					
9	Mode of Study		Х	PT	Х	DL	
10	Level of Award (FHEQ)	Level: 7					
11	Other teaching depts or institution (or not applicable)	N/A					
12	Professional, Statutory Regulatory Body(PSRB) details (or not applicable)	N/A					
13	QAA Benchmark Group	N/A					

¹⁴ Programme Rationale & Aims

The rationale for the course is to combine high-quality postgraduate training in bioinformatics with a major research component. It is particularly suitable for students wishing to progress to do a PhD in computational biology.

The specific aims of the course are to provide graduate students with:

- An understanding of bioinformatics together with the analytical skills (both theoretical and practical) relevant to this field.
- A general training in bioinformatics that meets clear industrial and academic needs to support and advance biotechnology and bioinformatics research and development, including emerging areas with acknowledged skills shortages (such as the analysis of Next Generation Sequencing data).
- The ability to apply the tools and techniques of computer science, biology, chemistry and statistics to obtain information from the vast wealth of biological data that can be accessed via the internet. The key emphasis is on acquiring generic skills (e.g. programming and database design), rather than individual pieces of software.
- Training in carrying out a research project: starting from researching the literature, planning the project, writing novel, or using existing, software to carry out the research, successfully addressing technical and theoretical challenges, analysing and critically evaluating the results and writing up the project in a scientific format
- Personal and transferable skills (e.g. IT, communication, analytical and problem-solving, interpersonal, organizational, presentation, time-management, etc.).

15	Entry Criteria
Applications are invited from graduates with a relevant 1st or 2.1 honours degree Relevant subjects include the physical, chemical or biological sciences, mathemat computing, engineering or allied subjects. Applications from those with degrees i subjects or with a 2.2 will be considered on merit. Students who fail to meet thes but have extensive evidence of relevant work experience may be accepted onto t course in exceptional circumstances. Very occasionally, applicants may need to b interviewed and/or to take a computing aptitude test to ascertain if they are likel ready at that time to benefit from the course.	
	The MRes course is very challenging and so applicants normally are required to enrol on the MSc initially so that their skills and knowledge can be thoroughly assessed. Applicants who perform very well in the first two modules may request to switch to the MRes course. The final decision is made by a panel of academic staff who teach on the course. Very occasionally, direct entry to the MRes course may be possible (e.g. in the case of applicants that have obtained funding through very competitive schemes) or where there is strong prior evidence that the student has already acquired the necessary skills to succeed.
16	Learning Outcomes

To gain the qualification the learner will have demonstrated the following skills specified
in the learning outcomes for approved modules in the programme and for the
programme as a whole:

- 1. Critically understand and apply computer techniques to a variety of biological information.
- 2. Use the tools and techniques of computer science, biology, chemistry and statistics to obtain information from the vast wealth of biological information that can be accessed via the Internet.
- 3. Understand the language and terminology of bioinformatics.
- 4. Be aware of current advances and challenges in bioinformatics.
- 5. The development of key practical skills (e.g. IT, analytical and problem solving skills).
- 6. Graduates will have developed/improved key personal and transferable skills (e.g. written and verbal communication, interpersonal, organisational, and presentation skills).
- 7. Graduates will have demonstrated an ability to research, plan, carry out and write up a project describing a computational solution to a Biology question.

17	Learning, teaching and assessment methods				
	Students will attend and be assessed on 4 15-credit half-modules (total 60 credits) offered				
	on the MSc Bioinformatics course. Teaching is generally in the form of 3-hour sessions that				
	combine a lecture with a practical in a computer lab. Assessment methods vary on different				
	modules, but include: traditional written examinations; in-class, open-book examinations in				

programming; essays; oral presentations; problem-based learning (e.g. a group programming project for the Biocomputing II half-module).

There are two phases of assessment for the research project: a literature review and oral presentation, and a thesis and viva.

¹⁸ **Programme Description**

All students take 4 x 15-credit modules, giving a total of 60 credits, and a 120-credit research project module. Selection of modules is made in consultation with the course Director.

Full-time students take 4 taught modules in a single year. They are required to select 2 computational/statistical modules from those listed in group A below, and 2 biological modules from those listed in group B below. Some flexibility may be allowed depending on the specific background of the student. Students are encouraged to complete 4 modules in the first term; alternatively, 3 in the first term and 1 in the second.

Group A

- Autumn term: BioComputing I [CRYS001H7], Statistics [CRYS003H7]
- Spring term: Data Science [CRYS004H7]

Group B

- Autumn term: The Molecular Basis of Life [CRYS002H7], Sequence Analysis and Genomics [CRYS008H7]
- Spring term: Structural Bioinformatics [CRYS005H7], Omics [CRYS007H7]

The remaining 120 credits are awarded for the Thesis MRes Bioinformatics module [CRYS017Q7]. This module comprises a literature survey (dissertation) and oral presentation that are assessed together at an intermediate stage of the course (usually around February), and a thesis and viva that are assessed together at the end of the course.

Part-time students may take an evening route or a daytime route through the course. The Thesis MRes Bioinformatics [CRYS017Q7] module spans two years for all part-time students. Part-time students are encouraged to complete three modules in the first year but there is considerable flexibility, given that only half of the 8 modules are available each year. The 15-credit modules available to part-time students differ between the two routes (evening and daytime) and alternate from one year to the next, as follows:

Even years (e.g. 2014/15, 2016/17): evening route year 1, daytime route year 2

Statistics [CRYS003H7]

The Molecular Basis of Life [CRYS002H7]

Structural Bioinformatics [CRYS005H7]

Omics [CRYS007H7]

Odd years (e.g. 2015/16, 2017/18): evening route year 1, daytime route year 2

BioComputing I [CRYS001H7]

Data Science [CRYS004H7]

Sequence Analysis and Genomics [CRYS008H7]

Part-time students submit their literature review and give their oral presentation at the end of their first academic year. They submit their thesis and have their viva examination at the end of their second year.

 Student Attendance Framework – in brief				
The full version of the 'Student Attendance Framework' is available <u>http://www.bbk.ac.uk/mybirkbeck/services/rules/Attendance-Framework.pdf</u>				
Principle				
Consistent and regular student attendance in class (or equivalent) promotes and affords student success. Inconsistent and irregular attendance is less likely to result in student success and is consistent with lower marks and degree classifications being achieved and awarded.				
Attendance expectation Birkbeck, University of London expects you to consistently attend all timetabled sessions, including lectures, seminars, group and individual tutorials, learning support sessions, workshops, laboratories, field trips, inductions and demonstrations.				
E-Registers				
All Birkbeck students are issued with student cards. Students are expected to take them to classes and to assessment venues and to present them to a member of staff if requested. This is for the purpose of identifying Birkbeck students.				

22	Student Support and Guidance				
	All Birkbeck students have access to a range of student support services, details can be found on our website here: <u>http://www.bbk.ac.uk/student-services</u>				
23	Methods of Enhancing Quality and Standards				
	The College has rigorous procedures in place for the monitoring and enhancing its				

educational provision. This includes regular monitoring of programmes drawing on feedback from various sources including external examiner's reports, student feedback, student achievement and progression data. In addition, departments are reviewed every four to five years through the internal review process that includes external input. For more information please see the Academic Standards and Quality website http://www.bbk.ac.uk/registry/about-us/operations-and-quality .

24	Programme Director	Dr Irilenia Nobeli	
25	Start Date (term/year)	Prior to 2008/2009	
26	Date approved by TQEC	Prior to 2008/2009	
27	Date approved by Academic Board	Prior to 2008/2009	
28	Date(s) updated/amended	20 Feb 2020. Changed title of "Systems Biology"	
		(CRYS007H7) to "Omics".
