

Programme Specification

1	Awarding body	Univer	sity of L	ondon			
2	Teaching Institution	Birkbeck College					
3	Programme Title(s)	MSc Finance					
4	Programme Code(s)	TMSFINAN_C					
5	UCAS code	N/A					
6	Home Department	Economics, Mathematics and Statistics					
7	Exit Award(s)	PG Dip, PG Cert					
8	Duration of Study (number of years)	1 year full time (October start), 2 years part time (Jan and Oct starts)					
9	Mode of Study	FT	Х	PT	Х	DL	Х
10	Level of Award (FHEQ)	7			•	•	1
11	Other teaching depts or institution	Management					
12	Professional, Statutory Regulatory Body(PSRB) details	<u>CFA Institute</u>					
13	QAA Benchmark Group	N/A					

14 | Programme Rationale & Aims

The MSc Finance programme aims to provide excellent training in modern finance. Students completing the MSc Finance obtain a thorough training in state-of-the-art financial expertise as required by professional bodies, including asset pricing, portfolio management, corporate finance, financial econometrics and asset management. Students completing the basic MSc Finance are well suited to work in many financial institutions, banks and insurance companies.

¹⁵ Entry Criteria

For entry on to the MSc Finance, the entry criteria are usually a second-class honours degree or better, or equivalent qualifications. Students with a third class degree may sometimes be admitted if there is clear evidence of under-performance, relative to potential, in the first degree.

16 | Learning Outcomes

At the end of the programme students should have a comprehensive overview of the field of finance, and potentially have specialized in one of the pathways that the MSc Finance offers. They should understand and be able to apply quantitative tools to solve problems in this field and conduct independent applied research, as witnessed by the completion of a dissertation.

To gain the qualification the learner will have demonstrated the following skills specified in the learning outcomes for approved modules in the programme and for the programme as a whole:

Please note: The learning outcomes for approved modules in the programme and for the programme as a whole should relate to the overall aims of the programme.

Subject Specific:

- 1. Substantial knowledge and understanding of mathematical and statistical techniques required for studying Finance at the Masters level
- 2. Substantial knowledge and understanding of the theory that forms the foundations of modern mathematical finance, including setting up and solving a portfolio decision problems, understanding utility theory and demonstrating the efficiency of complete markets.
- 3. Knowledge and understanding of the mean variance framework for portfolio analysis and the ability to work with the capital asset pricing model (CAPM).
- 4. Knowledge and understanding of the role of financial intermediaries and the economic reasons for regulating the banking sector.
- 5. Knowledge and understanding of the details of the process through which financial market prices are determined, including the role of asymmetric information as well as institutions such as organized stock exchanges
- 6. Knowledge and understanding of continuous time pricing theory as applied to options, futures, and fixed-income securities
- 7. Knowledge and understanding of the modern econometric techniques used in the analysis of financial time series, and the ability to formulate and test financial models

Intellectual:

- 8. Critical awareness of current issues surrounding financial markets informed by the research Forefront
- 9. An advanced ability to approach problems systematically, along with a detailed knowledge of techniques to address those problems at an advanced level
- 10. An advanced ability to critically review current literature, pose new questions, and carry out original research
- 12. An advanced ability to analyse and interpret data, and the ability to extrapolate making judgements even in the absence of complete data

Practical:

13. An advanced ability to apply the logic of no arbitrage pricing in financial markets, and the

ability to price derivatives and default-free as well as defaultable bonds using numerical methods

- 14. An advanced ability to use econometric techniques to analyse financial data
- 15. An advanced ability to communicate conclusions to both specialist and non-specialist audiences

Personal and Social:

- 16. An advanced ability to learn independently
- 17. An advanced ability to learn from a wide range of sources including journal articles
- 18. An advanced ability to transfer knowledge from one context to another
- 19. Self-motivation, time management, organization, and the exercise of personal responsibility

17 Learning, teaching and assessment methods

The majority of teaching is delivered in the form of the traditional chalk-and-talk lectures. Given the formal content of the modules, this method gives the lecturers the opportunity to clarify each step of any derivation, react instantly to clarification queries and vary the pace of the lecture where appropriate.

While lecturing is the primary method of delivery, it is by no means the only one. An important aspect of learning involves solving problems and, to this end, many of the lectures will be augmented by supporting classes to discuss solutions to problem sets.

Most modules make use of substantial handouts designed to help students digest the material developed in lectures. Specific directions to textbooks, academic papers or extensive lecture notes help the students obtain a clear idea of the material. Lectures also specify precise objectives at the outset and this knowledge is particularly helpful in calibrating oneself with the state of the modules especially if work commitments force absence.

An important ingredient of learning is private study. Apart from the reading lists the programme requires students to produce independent project work, aiding development of analytic, quantitative as well as written communication skills.

Learning is further assisted by review sessions; these are important as they also provide guidance on examination technique.

The following methods of assessment are used:

Unseen examinations

Assessed coursework

Dissertation

For each module the bulk (generally around 80%) of the assessment comes from unseen examinations. These are typically held in June, thus giving as much time as possible for assimilation of the material, promoting an overall understanding and engagement with the curriculum. The contribution (around 20%) from the coursework ensures that, throughout the year, students get practice, and are given feedback, in tackling and solving problems independently without time pressure of examinations.

The modules are assessed on a scale on which 50% represents a pass mark, 60-69% a merit and 70% or above yields a distinction. The dissertation is assessed similarly as Fail, Pass, Merit or Distinction.

The range of questions and problems set within examinations and coursework are structured to balance theory and practice, to address the individual learning outcomes and

to discriminate between different levels of achievement. Our assessment strategy also takes into consideration that students can exhibit a wide range of aptitudes and abilities in different aspects of the programme. Thus the assessment is designed to ensure a good coverage of the curriculum so that all students have the opportunity to demonstrate their strengths.

Examination papers and dissertations are marked independently by two markers who then compare marks and produce agreed final marks. All marks are moderated by an external examiner who is also asked to comment on the suitability of the assessment.

18 | Programme Description

The programme can be completed through one year of full-time study or two years of part-time study. The programme includes the following modules:

- A variety of compulsory modules which cover essential topics to help students pursue a successful career in all areas of Finance.
- A final academic dissertation in which students pursue an empirical or theoretical study in a topic of their choice under supervision of one member of the faculty.

List of compulsory modules:

- Mathematics for Finance
- Financial Markets
- Economics of Financial Markets
- Principles of Financial Reporting
- Corporate Finance
- Econometrics of Financial Markets
- Asset Management

Programme Description

Part-time programme – 2 years

Year 1

Level	Module Code	Module Title		Status*	
6	BUEM075S6	Mathematics for Finance	30	Compulsory	
7	BUEM076S7	Financial Markets	30	Compulsory	
7	BUEM043H7	Corporate Finance	15	Compulsory	
7	BUEM040H7	Asset Management	15	Compulsory	

Year 2

Level	Module Code	Module Title		Status*
7	BUMN039H7	Principles of Financial Reporting	15	Compulsory
7	BUEM074H7	Economics of Financial Markets	15	Compulsory
7	BUEM077S7	Econometrics of Financial Markets	30	Compulsory
7	BUEM028S7	Dissertation MSc Finance	30	Compulsory

Full-ti	Full-time programme – 1 year
